Unit Overview

The **Instituto de Astrofísica e Ciências do Espaço (IA)** is a research infrastructure with a national dimension, embodying a bold vision for the development of Astronomy, Astrophysics and Space Sciences in Portugal. It is the largest research unit of this area in the country, being responsible for the majority of the national productivity in international ISI journals in the area of Space Sciences — one of the scientific areas with the highest relative impact factor and highest average number of citations per article for Portugal. IA has a demonstrated ability to drive major astronomical projects, at all development levels: scientific and technical definition, instrument concept and design, construction and commissioning, and scientific exploitation.

The mission of IA is to foster research with the highest impact in the field of astrophysics and space sciences and to support teaching and training of young researchers and students in close collaboration with the Universities of Lisbon and Porto, and from June 2021, in Coimbra. Indeed, IA has now grown with the creation of a new pole at the University of Coimbra, with headquarters at the Observatório Geofísico e Astronómico of the University of Coimbra (OGAUC), of the Science and Technology Faculty of the University of Coimbra (FCTUC), which reveals the national impact of the IA. It also aims to promote wide-ranging science communication activities that enhance public understanding of the Universe and our place in it, as well as awareness of the importance of research in this field.

Our vision is to achieve international leadership in key areas of astrophysics and space sciences, taking full advantage and realising the potential created by the national membership of the European Space Agency (ESA) and the European Southern Observatory (ESO) and the Square Kilometre Array Observatory (SKAO). This is done through state-of-the-art research, enabled by our leading participation in strategic international ground and space-based projects and missions.

In 2023, the IA resumed in-person activities following the easing of the COVID-19 restrictions. The IA team continued to engage in cutting-edge research, maintaining a leading role in international ground- and space-based projects and missions. Despite the pandemic's impact, the scientific output remained strong in both volume and impact, positioning IA for long-term growth. Efforts were focused on strengthening synergies across its three nodes, enhancing IA's international presence. The team remained cohesive during the preparations of the Research Unit evaluation, and the recent establishment of the Diversity and Inclusion Group continued to support the growing team at IA.

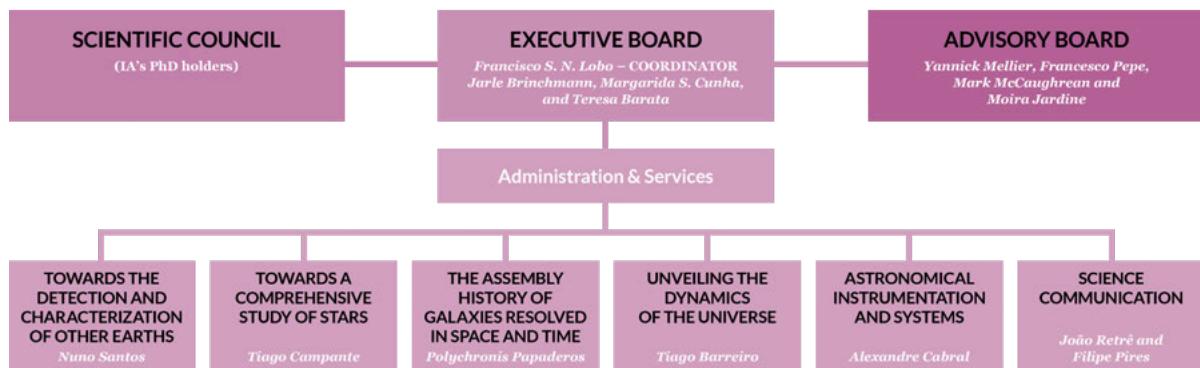

The upcoming pages offer a detailed summary of IA's activities in 2023, highlighting IA's involvement in ESA and ESO projects. These initiatives, initially driven by targeted scientific objectives, have fostered stronger inter-group collaboration and the creation of new synergies within IA. We would like to express our deep appreciation for the commitment of our researchers, students, and support staff, whose efforts sustained IA through the challenges of the COVID-19 pandemic and during the preparations for the Research Unit evaluation. We also pay tribute to the resilience shown by the entire team in face of these particularly difficult circumstances.

Francisco S.N. Lobo, Jarle Brinchmann, Margarida S. Cunha, Teresa Barata
IA Executive Board

IA Management

The Executive Board is composed of 2 members from the Porto node (Jarle Brinchmann and Margarida S. Cunha), 1 member from the Lisbon node (Francisco S.N. Lobo) and 1 member of the Coimbra node (Teresa Barata), with Francisco S.N. Lobo as the coordinator of the research unit.

IA SCIENTIFIC MANAGEMENT STRUCTURE

During 2023, the EB continued having regular weekly meetings to coordinate the scientific and management activities of the IA strategic plan. Every other week these meetings also include group leaders, including the Science Communication Group. Contacts with the management institutions were also done whenever necessary.

IA-ON 10

The IA-ON meetings continue to be a fundamental annual event enhancing scientific discussion between the whole IA team on outreach, management issues and strategic lines of the Institute. The 10th Internal workshop (IA-On 10) took place in Fátima, during the 26th and 27th of January, at the **Domus Pacis Fátima Hotel**.

The **IA-On 10** assembled most of the team, with an attendance of approximately 75 participants among researchers, students, and support personnel. The highlights of the year were shared and discussed with the whole team. In 2023, the focus was given to the preparations of the external Advisory Board visit and the pending FCT evaluation of the Research Units.

Research Projects/Programmes

During 2023, a number of funded projects were on-going at IA, providing most of the funds available for research, including outreach activities.

Projects focused on scientific activities

The research projects that in 2023 were supported by national and European funds are:

(i) Projects funded by the European Commission (EC):

- Revealing the Milky Way with Gaia (MW-GAIA) (COST ACTION CA18104)
PI: Vardan Adibekyan & Nuno Santos
[start date: 14 March 2019 – end date: 13 March 2023]
- Space Weather Awareness Training Network (SWATNet) (H2020-MSCA-ITN-955620)
PI: Teresa Barata
[start date: 1 March 2021 – end date: 28 Agosto 2025]
- Multifrequency and Machine Learning methods to Search for Early Super Massive Black Holes (ML-SMBH) (HORIZON-MSCA-2021-PF-01-101066981)
PI: Bruno Arsioli
[start date: 1 December 2022 – end date: 30 November 2024]
- FInder ExoeaRths: tackling the ChallEngEs of stellar activity (FIERCE) (GAP-101052347, ERC-2021-ADG)
PI: Nuno Santos
[start date: 1 October 2022 – end date: 30 September 2027]

(ii) Research projects funded by Fundação para a Ciência e a Tecnologia (FCT):

- Modified Gravity impact on Cosmology and Astroparticles (MGiCAP) (CERN/FIS-PAR/0037/2019)
PI: Francisco Lobo
[start date: 1 September 2020 – end date: 31 August 2023]
- Dark matter and metals in galaxies (DarkMAGE) (PTDC/FIS-AST/4862/2020)
PI: Jarle Brinchmann
[start date: 1 September 2021 – end date: 31 August 2025]
- BEYond Lambda (BEYLA) (PTDC/FIS-AST/0054/2021)
PI: Noemia Frusciante
[start date: 1 January – end date: 31 December 2024]

- Stellar Activity Modelling for exoplanet detection (SAM) (EXPL/FIS-AST/0615/2021)
PI: João Faria
[start date: 1 January 2022 – end date: 31 December 2023]
- Finding Lyman-alpha emitters through machine learning (FLAEMING) (EXPL/FIS-AST/1085/2021)
PI: Ana Paulino-Afonso
[start date: 1 January 2022 – end date: 31 December 2023]
- Phi in the Sky: Astrophysical probes of fundamental physics (PTDC/FIS-AST/4862/2020)
PI: Carlos Martins
[start date: 1 January 2023 – end date: 31 December 2025]
- Star-exoplanet compositional link: towards realistic characterization of terrestrial planets (2022.06962.PTDC)
PI: Vardan Adibekyan
[start date: 1 January 2023 – end date: 31 December 2024]
- Cool Stars in the near-Infrared (2022.04416.PTDC)
PI: Elisa Delgado Mena
[start date: 1 January 2023 – end date: 31 December 2024]
- Uncovering the nature of cosmic strings (2022.03495.PTDC)
PI: Lara Sousa
[start date: 1 January 2023 – end date: 30 June 2024]
- Using Ap stars as LABoratories for probing chemical transport mechanisms, with ultra-precise space- based photometry (2022.03993..PTDC)
PI: Margarida Cunha
[start date: 10 March 2023 – end date: 9 March 2025]
- Portuguese Regional Ionosphere ModEl (PRIME) (EXPL/CTA-MET/0677/2021)
PI: Anna Morozova
[start date: 1 January 2022 – end date: 31 November 2023]
- Abordagens de aprendizagem automática para a cosmologia com enxames de galáxias a partir da missão Euclid (ML_Clusters) (EXPL/FIS-AST/1368/2021)
PI: António da Silva
[start date: 1 January 2022 – end date: 30 December 2023]
- Bioscosmologia: O nascimento de uma nova ciência (Biocosm) (EXPL/FIS-AST/1418/2021)
PI: Andrew Liddle
[start date: 1 January 2022 – end date: 30 June 2023]

(iii) Infrastructure funded projects (FCT):

- R&D Unit Financing: Instituto de Astrofísica e Ciências do Espaço (UIDB/04434/2020 & UIDP/04434/2020)
PI: Francisco Lobo
[start date: 1 January 2020 – end date: 31 December 2024]

(vi) Other projects

- Participation to CHEOPS Science Operations Centre (SOC)
PI: Nuno Santos
[start date: 31 October 2013 – end date: 31 October 2023]
- PLATO OGSE and PDC Phase B (ESA Contract No. 4000133026)
PI: Nuno Santos
[start date: 1 January 2018 – end date: 31 December 2025]
- e-CHEOPS: Extending the CHEOPS mission (ESA Contract No. 4000142255)
PI: Sérgio Sousa
[start date: 1 October 2023 – end date: 31 December 2025]
- ANDES@ELT (ESA Contract No. 4000143136)
PI: Nuno Santos
[start date: 1 January 2023 – end date: 31 December 2025]
- MWWM: Mars Wind Wave Mapping (ESA RFP/3-17570/22/ES/CM)
PI: Pedro Machado
[start date: 6 June 2022 – end date: 5 June 2023]
- Moons AIT: Partnership for the MOONS Consortium for the Construction of a Multi-Object Optical and Near-infrared Spectrometer for the VLT (ESO-VLT-MOU-MON-14620-0001)
PI: Alexandre Cabral
[start date: 27 November 2020 – end date: 26 May 2023]
- Space Weather (SWE) Products for Southern Europe - Phase 1 (PROSE) (ESA)
PI: Anna Morozova
[start date: 23 June 2022 – end date: 30 June 2024]
- ERAACA: Elaboração da Estratégia Regional de Adaptação às Alterações Climáticas do Alentejo (CPS02/2022)
PI: Pedro Machado
[start date: 16 March 2022 – end date: 15 June 2023]

Projects focused on communication and outreach

During 2023 there were several funded projects in IA:

- AstroCamp 2023
PI: Carlos Martins
[start date: 1 january 2023 – end date: 1 December 2023]
- Ocupação Científica dos Jovens nas Férias 2023
PI: Carlos Martins
[start date: 1 January 2023 – end date: 31 December 2023]
- Formação ESERO
PI: Filipe Pires/Ilídio Costa
[start date: 1 January 2023 – end date: 31 December 2023]
- Renewing the solar system exhibition – Europlanet Society
PI: João Retré
[start date: 1 January 2020 – end date: 31 December 2023]
- Capacitação dos Centros de Ciência Viva (NORTE-09-5864-FSE-000027)
PI: Filipe Pires
[start date: 1 April 2021 – end date: 31 March 2023]
- Rede de Escolas Ciência Viva (RE-C06-i04.02 – Impulso Jovem Steam)
PI: Filipe Pires
[start date: 1 March 2023 – end date: 30 March 2025]
- Abordagem STEM e a sua influência nas aprendizagens de Física, interesse e motivação (GoSTEM) (PTDC/CED-EDG/31480/2017)
PI: Rui Agostinho
[start date: 1 March 2019 – end date: 28 February 2023]

Reports

The figures below illustrate the institute's productivity during the past year. There is a clear and natural relation between the number of researchers and the number of papers in journals subject, understandably, with a small shift in time. The figures show a continuation of the increase in the number of publications and communications, which is a strong indication for the strong activity of the Institute. The number of citations also maintains an increasing trend which is not simply justified by an increase in the numbers of articles. Indeed, the figures show that the accumulated impact continues to grow.

The number of citations obtained in a given year for all the IA articles published since 1990 up to that year.

The accumulated impact in a given year is measured as the ratio between the sum of the number of citations up to that year since 1990 and the number of articles in the same period.

Report from the Thematic Line

Towards the detection and characterisation of other Earths

Activities of the team were centred around i) the detection, detailed characterization, and study of exoplanet systems and their host stars, and ii) the study of Solar System bodies (with a focus on their atmospheres), seen also as a stepping-stone towards the understanding of exoplanet atmospheres. Exoplanet research has been mostly centred in the Porto node of IA, while Solar System research is divided in planet atmospheres (centred in Lisbon) and the study of minor bodies (centred in Coimbra). Active collaborations exist between the three nodes, namely in the study of planetary atmospheres (Porto-Lisbon) and the study of solar system exospheres (Lisbon-Coimbra).

In this context, the team focused on tackling high impact questions such as: How diverse are planetary systems in the Galaxy? How frequent are rocky, temperate planets orbiting other Suns? Are there other habitable planets?

To answer these questions, the team concentrated its activities on:

- 1) the search and detailed characterization of exoplanets, including the study of their atmospheres, using state-of-the-art high-resolution spectroscopy and space-based photometric data;
- 2) the study of astrophysical sources of "noise" that hinder the detection and characterization of planets, as well as developing methods to correct/model them, keeping in mind the end goal of detecting and characterising rocky planets orbiting other suns
- 3) the study of the star-planet connection as a way to better characterise planetary systems, their properties and formation processes.
- 4) the exploration of new avenues in the study of Solar System atmospheres (focused on Venus, Mars, and Jupiter), namely to understand their dynamics and chemistry.

A significant part of this research is based in our top-level (leading) scientific participation in different international consortia. From the ongoing projects, we highlight ESO's ESPRESSO and ESA's CHEOPS mission (now starting its first extension until 2026), the NIRPS spectrograph (@ESO's 3.6m), as well as the soon-to-be-commissioned (2025) PoET telescope (entirely led by IA and funded through an ERC grant). All these projects serve as stepping-stones for the science opportunities raised by future projects and missions such as ESA's PLATO (2026), as well as (further ahead) projects such as ANDES@ESO's ELT (2031) and ESA's ARIEL (2029), and EnVision (2031) missions. Our high-level participation in all these projects assures continuity, reinforces the existing strategy, and allows the team to be in the forefront of exoplanet detection and characterization for the next decade and beyond.

Scientific Highlights for 2023

In 2023, a total of 9 Press-releases were published by IA announcing scientific results or other major activities (e.g. issuing from ongoing instrumentation projects) with a leading scientific participation of the team. Below we highlight 3 of these.

Discovering planets around giant stars: understanding the fate of our Solar System

In 2023, the IA team made significant progress in the understanding of exoplanet populations around giant stars. In two recently published articles led by Elisa Delgado-Mena and Filipe Pereira, the discoveries of two “Jupiters” and two “hot Jupiters” around stars of this type were announced.

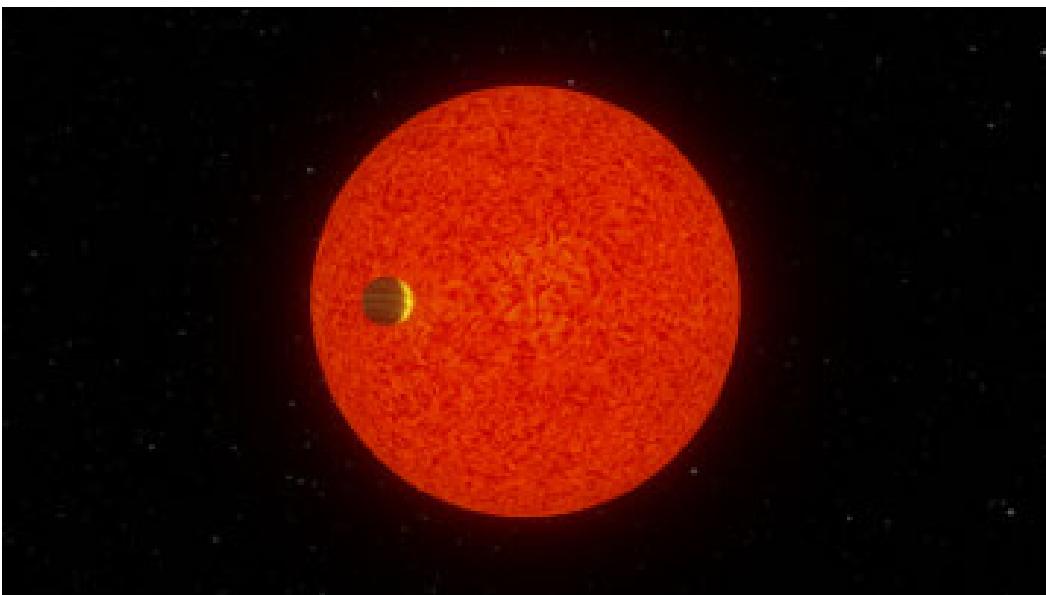

Giant exoplanets, similar to Jupiter, are common in the Universe. But in intermediate mass stars and closer to the end of their life, the frequency of this type of planets decreases considerably – currently, less than 5% of known planets orbit stars with masses greater than 1.6 times the mass of the Sun.

Elisa Delgado Mena (IA & Universidade do Porto) explains that “the abrupt decrease in the frequency of detection of giant planets around stars with masses greater than twice the mass of the Sun led us to observe young open clusters, as they contain many intermediate-mass stars in the giant phase. It is easier to detect planets at this stage, when the stars have cooled down and have a slower rotation, which allows us to measure radial velocities from their spectrum.”

Due to this difficulty, the team began a systematic survey, which has been ongoing for 17 years, with the HARPS spectrograph, mounted on ESO's 3.6-meter Telescope. As a result of this long term effort, they detected two new giant planets in long period orbits (between 744 and 1155 days) around stars from open clusters IC4651 and NGC3680. But the most surprising data was found by looking at 4 other stars that show stable periodic signals for more than 15 years, which despite appearing to be caused by planets, in reality have stellar origins. “It is a mystery how these stellar signals can last so long and whether they are caused by magnetic fields or other types of stellar phenomena. Our work shows that there may be several “planetary impostors”, which we can only unravel after long-term observations”, added Elisa Delgado Mena.

In the article led by Filipe Pereira, the team used transit photometry data, obtained with the TESS space observatory (NASA), to detect two hot Jupiters, around red giant stars. These observations were later confirmed with measurements of radial velocities obtained with different telescopes. Around the star TOI-4377, the team detected an exoplanet with 0.96 times the diameter and 1.35 times the mass of Jupiter, orbiting in just 4.38 days, at a distance of just 0.058 astronomical units from the star. Around the star TOI-4551, the team detected an exoplanet with about 1.06 times the diameter and 1.5 times the mass of Jupiter, which orbits its star in just under 10 days and at a distance of 0.1 astronomical units.

These are two rare examples of “hot Jupiters” orbiting red giant stars. Systematic surveys using radial velocities initially suggested that these planets would be destroyed by their star, which would explain the small number of these types of exoplanets detected. However, more recent results, based on TESS data, appear to suggest that this destruction process occurs later than initially estimated.

Artist's image of a "hot Jupiter" orbiting a red giant star.

Three-dimensional atmosphere of Venus prepares future observations of rocky exoplanets

The atmosphere of Venus can be used as a natural laboratory to understand the evolution of Earth-like planets, according to a study led by the Institute of Astrophysics and Space Sciences (IA).

Venus and Earth are in almost the same region of the Solar System and have similar sizes and densities, but their atmospheres and surface conditions are radically different. If they were observed from a distance of 100 light years, how could we tell them apart?

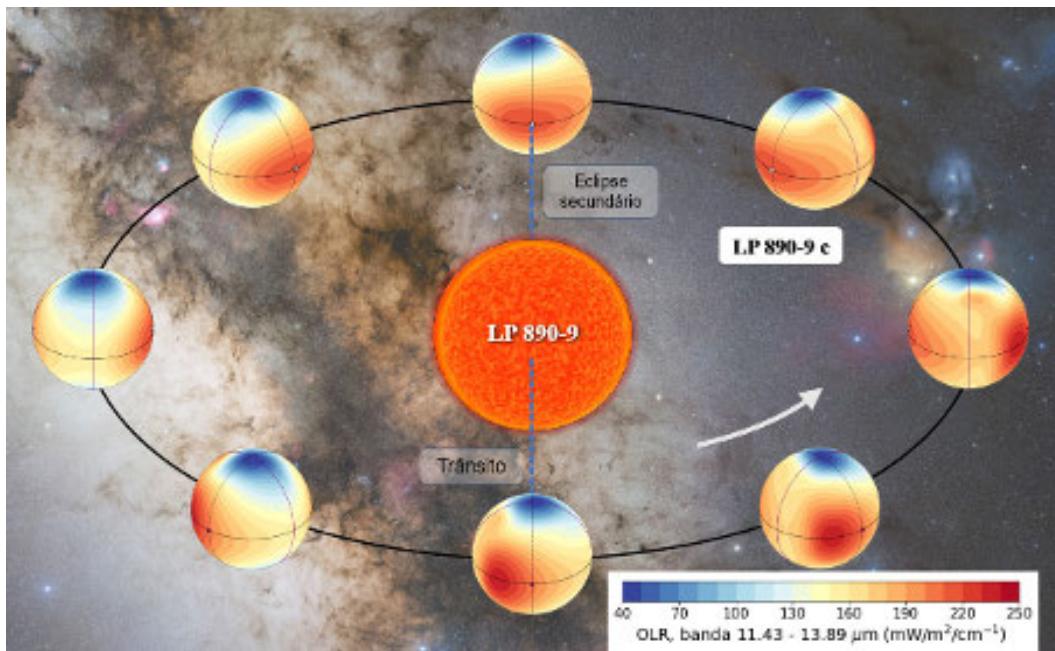

In a paper led by Diogo Quirino, from the Institute of Astrophysics and Space Sciences (IA), and by Gabriella Gilli, IA collaborator and researcher at the Institute of Astrophysics of Andalusia (IAA –CSIC), a team of researchers chose a planet 106 light years away, with 1.37 times the diameter of Earth, to present the first three-dimensional simulation of the climate of a rocky planet with the characteristics we currently know in Venus. The planet, named LP 890-9 c, orbits its star at a distance that places it in the habitability zone, but very close to the limit of uncontrolled greenhouse effect that we see on Venus.

This planet's potential to be similar to Venus makes it an ideal target for studies that seek to understand the evolution of the atmosphere on terrestrial-type planets and explain the climate divergence we observe today between Earth and Venus. This simulation will help prepare observations of this and other rocky planets with the instruments of the current James Webb Space Telescope (JWST), or the future Extremely Large Telescope (ELT), of the European Southern Observatory (ESO), among others.

Based on the hypothesis that the climate of LP 890-9 c evolved into a modern Venus-type atmosphere, the authors simulated it with a surface pressure 92 times greater than that of Earth, a chemical composition dominated by 96.5% carbon dioxide and a global blanket of sulfuric acid clouds. Previous

studies indicate that, in fact, the accumulation of carbon dioxide in the atmosphere is one of the likely scenarios for evolution in terrestrial-type planets orbiting red dwarf stars. The team thus offers predictions for the temperature and intensity of winds at the top of the clouds, as well as the number of observations that will be necessary to carry out the atmospheric characterization of this planet.

It is not yet known whether exo-Venuses exist, but three-dimensional models and simulations, informed by the knowledge we have about the Solar System, are essential so that scientists can have useful and operational tools when discovering extrasolar planets.

Schematic representation of the orbit of the exoplanet LP 890-9 c and the radiation emitted by the planet in a specific band of the spectrum. This information obtained with the three-dimensional atmospheric model is used to calculate the variation in radiation received by an observer on Earth throughout the planet's orbit. The planet and the star are not to scale. Courtesy Diogo Quirino/ESO.

Jupiter as seen by an exoplanet hunter

For the first time, an instrument to find planets light years away was used on an object in the Solar System, in a study on Jupiter's winds carried out by the Institute of Astrophysics and Space Sciences (IA).

We find ourselves at a time when it has become almost commonplace to discover planets orbiting another star, with more than 5,000 already registered. The first distant worlds to incorporate this list were mainly giant planets, similar to but also very different in many ways from Jupiter and Saturn. Astrophysicists have already begun to obtain data on the atmospheres of exoplanets, but fundamental questions about the atmosphere of the largest planet in the Solar System are yet to be answered.

To understand what happens in Jupiter's clouds and air layers, it is necessary to study it over time, in continuous observations. Now, for the first time, an instrument developed to find and analyse worlds light years away, exoplanets, has been pointed at a target in the Solar System, 43 light minutes away from Earth: the planet Jupiter.

The ESPRESSO spectrograph, installed on the European Southern Observatory's (ESO) VLT telescope, was used by a team from the Institute of Astrophysics and Space Sciences (IA) to measure wind speeds on Jupiter. The method used with ESPRESSO was developed by the IA Planetary Systems group with other spectrographs to study the atmosphere of Venus. The IA group has been measuring the winds of this neighbouring planet and has been contributing to the modelling of its general atmosphere system for several years.

Now, the exploratory application of this method with a state-of-the-art instrument such as ESPRESSO has resulted in a success that opens new horizons to the knowledge of our cosmic neighbourhood. This work affirms the feasibility of systematically monitoring the most distant atmospheres on gaseous planets.

With ESPRESSO, the team was able to measure winds on Jupiter from 60 to 428 km/h with an uncertainty of less than 36 km/h. To verify the effectiveness of Doppler velocimetry from telescopes on Earth in measuring winds on Jupiter, the team also gathered measurements obtained in the past in order to compare the results. Most of the existing data was collected by instruments in space and used a different method, which consists of obtaining average values of wind speed by following cloud patterns in images captured at nearby times.

The consistency between this history and the values measured in this now published study confirms the feasibility of implementing Doppler velocimetry in a program for monitoring Jupiter's winds from Earth. The monitoring will allow us to collect data on how winds change over time and will be essential for developing a reliable model of the global circulation of Jupiter's atmosphere. This computational model should reproduce the differences in winds depending on latitude, as well as Jupiter's storms, to help understand the causes of the atmospheric phenomena we observe on this planet.

The success of these observations with ESPRESSO proves to be important at a time when its successor, ANDES (on which the IA team is deeply involved), is being designed for the future Extremely Large Telescope (ELT), also from ESO and currently under construction in Chile, but also the future JUICE mission, from the European Space Agency (ESA), dedicated to Jupiter and which will provide additional data.

Thematic line meetings, Journal Clubs and other activities

In 2023, as for the previous years, the IA-planet line maintained a regular journal club and team meeting agenda. Team meetings and journal clubs are organised every two weeks. Meetings include a presentation of "general information", as well as a short presentation of the work being carried out by one PhD student and one researcher, followed by discussion. This format helps the whole team to be acquainted with the research that is being carried out and helps the students to develop presentation skills and identify potential problems and solutions in their research project. Journal clubs include the presentation of recent research papers, followed by discussions.

All this information is kept up-to-date in the new team web pages (<http://planetas.iastro.pt>).

All regular team meetings and journal clubs were performed remotely via Zoom, to assure a smooth participation from team members in all 3 nodes (Porto, Coimbra, and Lisboa).

We also organised our annual team meeting (called "2-DEMOC"), where the team strategy and plans (both scientific and organisational) were discussed. This year's event took place in Santarem.

Among the participation in several Scientific Organizing Committees of international conferences, the team organised an international conference in Porto (Towards Other Earths III) also started the organisation of one large international conference (Extreme Precision Radial Velocities 6) that will take place in 2025. Finally, the 1st PoET workshop was organised in February.

Team members actively participated in different public outreach activities, including public talks and debates in schools and online, as well as other outreach events. In this context, the team has also kept updating a public outreach page on Planetary Systems (<https://outrosmundos.iastro.pt>), where information in Portuguese is provided about planetary system's science as well as the discoveries where the team is involved.

In 2023, 8 MSc thesis were successfully finished (several other PhD and MSc are ongoing):

- “Estimativa de dose efetiva num corpo humano submetido a um campo de partículas semelhante ao encontrado na superfície de Marte”, Dr. Miguel Correia Ralha (MSc)
- “Looking at the Sun, finding other Earths: identification of solar regions”, Dr. José Lino (MSc)
- “Fungal melanins as possible biosignatures in exoplanetary conditions”, Afonso Mota (MSc)
- “SAR Tomography To Image Asteroid Interior: preparation of the JuRa/HERA data inversion”, Miguel José Tavares Gomes (MSc)
- “Collisional Evolution of Jupiter Trojans”, Vasco Serra Cardoso (MSc)
- “Stellar flare spectroscopy with ESPRESSO: detecting planets around flaring stars”, José Manuel Leiria Amoreira (MSc)
- “Where in the Milky Way do exoplanets preferentially form?”, Joana Raquel Aguiar Teixeira (MSc)
- “A Machine Learning approach to determine Stellar Atmospheric Parameters using Spectral Data”, Joana Catarina Santos Leite (MSc)

A number of undergraduate students also worked with the IA team in different projects:

- “Development of a tool for the normalization of stellar spectra - application to ESPRESSO data”, Diogo Marques
- “Determining the rotational velocity of stars with exoplanets”, Bárbara Oliveira
- “Determining the rotational velocity of stars with exoplanets”, Pedro Branco
- “A new activity proxy for finding other Earths”, Pedro Afonso – A new activity proxy for finding other Earths

In 2023, team funding comes mostly from IA "strategic funding" as well as from 2 running FCT (PEX) projects and one ERC Advanced Grant. The preparation for the response to the FCT 2023 call (deadline in March 2024) was also part of our activities.

Furthermore, funding for our participation in the CHEOPS, PLATO, ARIEL, and ANDES projects was secured through PRODEX. We note, however, the PRODEX funding covers only the "project level activities".

We would further like to highlight the strong collaborative work done in 2023 to foster collaborations of IA-Planet team members with other groups in the institute. This particularly concerns collaborations with the Stellar and Instrumentation groups. Collaborations with the stellar group include the characterisation of planet host stars, stellar spectroscopy, and asteroseismology, the study of solar and stellar activity, and Galactic chemical evolution. Instrumentation group collaborations touches several aspects related with the development of new instruments and related software, such as PoET, NIRPS, CHEOPS, PLATO, and ANDES. Collaborations with other groups, namely cosmology and science communication, has also been done, respectively, through common instrumentation interests and through the communication of science results.

Nuno Santos

Group Leader

Report from the Group

Towards a comprehensive study of stars

Our activity during 2023 was distributed across three main research lines: Sun and Heliosphere, Stellar Physics, and Stellar Populations.

Sun and Heliosphere research line. We continued to participate and collaborate in several national and international projects. Group members lead the Portuguese participation in the SWATNet MSCA Innovative Training Network, are actively contributing to the European Solar Telescope (EST) project, developed the first detailed regional model of the ionosphere , and recently started a partnership with MIT to develop a coupled thermosphere-ionosphere model for the Atlantic mid-latitude regions. Our participation in EST is of particular strategic importance. The Portuguese contribution to the project focuses on developing the Integral Field Spectropolarimeter, of which one of the group members is Co-PI.

Stellar Physics research line. The exploitation of asteroseismic data from TESS (NASA) is being carried out in the context of the TESS Asteroseismic Science Consortium (TASC), in which our team is strongly involved, with representation on the Steering Committee and co-leadership of one of its working groups. Furthermore, our team continues to be strongly involved in the preparation of the stellar science component of PLATO (ESA), with responsibilities in the design, implementation, and validation of sections of the Stellar Analysis System (SAS) pipeline, leading work packages in the framework of both the PLATO Science Management (PSM) and the PLATO Data Center (PDC). The team also continued to actively contribute to the Ariel (ESA) consortium, in the context of which we coordinate working groups responsible for determining the surface chemical abundances as well as the fundamental properties of the mission's target stars.

The team continued to engage in the characterization of pre-main-sequence stars and their environments, in particular of T Tauri stars. Our research also included studies of low-mass stellar and substellar populations in young clusters and star-forming regions in the Milky Way. The team's involvement in SPIRou@CFHT is of particular importance in this respect, with one of its members being part of the consortium's Steering Committee.

Stellar Populations research line. We continued to be actively engaged in several international consortia, including ANDES@ELT, the Maunakea Spectroscopic Explorer (MSE), ESPRESSO@VLT, and NIRPS@ESO 3.6-m Telescope. We highlight the team's involvement in ANDES@ELT , where we play a role in the development of the scientific priorities and the definition of top level requirements for the instrumentation.

Scientific highlights for 2023

A deeper understanding of solar physics with the help of machine learning

The use of machine learning techniques within the field of solar physics holds promise for advancing our comprehension of the intricate phenomena occurring in the Sun's atmosphere. In Asensio Ramos, Cheung, Chifu & Gafeira (2023, Living Reviews in Solar Physics, 20, 4), the authors provide a

comprehensive review on the topic of machine learning applied to solar physics. Through methodologies like deep learning, it should be possible to sift through vast data sets derived from modern-day solar observations, thus uncovering patterns and trends previously elusive via conventional methods. For instance, this will greatly aid in elucidating phenomena such as solar flares, which have significant influence over Earth's environment. Moreover, machine learning allows delving deeper into solar data, accelerating the development of more intricate models to unravel the Sun's inner mechanisms. Additionally, its application streamlines the analysis process, decreasing the reliance on manual labor and amplifying research efficiency within this domain. A research note was issued by IA accompanying the publication of this review article.

Towards a regional ionosphere model

The ionospheric response at middle latitudes to geomagnetic storms is not yet very well understood. In Barata et al. (2023, *Atmosphere*, 14, 949), the authors attempt to fill this gap by studying variations in the total electron content (TEC) associated with eight strong geomagnetic storms (which occurred between 2015 and 2022; see Figure below) obtained from GNSS receivers in the eastern area of the North Atlantic (Portuguese continental and insular territory). They found that there is no clear dependence between the strength of a geomagnetic storm and the strength and type of an ensuing ionospheric storm, as well as the appearance of different types of discontinuities in the work of GNSS systems. Even though six out of the eight studied storms were accompanied by reports of different kinds of failure in one or many of the operational GNSS systems, some of the storms were nevertheless completely "invisible" from a GNSS point of view. The authors believe that this ambiguity is due to the lack of systematic and uniform collection and analysis of data on the GNSS system failures. This study is a direct contribution to the group-led PRIME FCT R&D project, which aims at developing a regional ionosphere model. Such a model will likely play an important role in supporting the air navigation sector (Portugal is located on the border of the EGNOS system, a satellite-based augmentation system for Galileo).

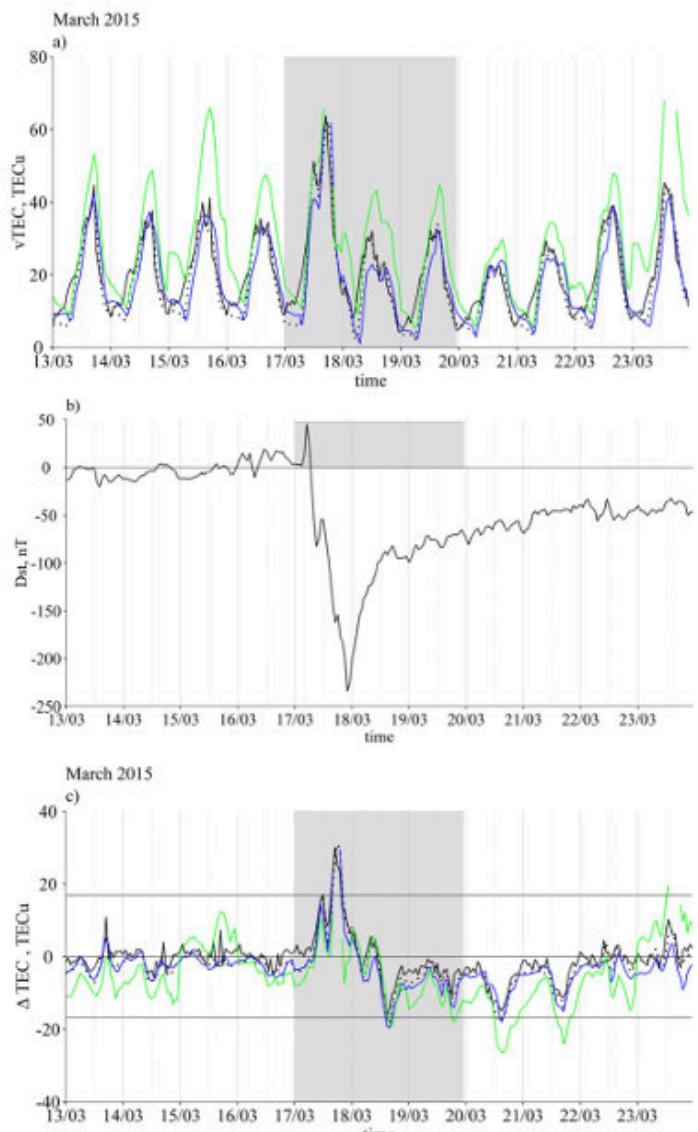

Figure 1: Variations of the TEC and Dst geomagnetic index at three different locations during March 2015. From Barata et al. (2023).

Does the Sun behave like other “Sun-like” stars?

Photometric time series of solar-like stars may exhibit rotational modulation, i.e., brightness variations due to active regions co-rotating with the stellar surface. These signatures allow one to constrain properties of stellar rotation and magnetic activity. In Santos et al. (2023, *Astronomy & Astrophysics*, 672, A56), the authors investigate the behaviour of the photometric magnetic activity proxy, S_{ph} , is adopted for this purpose. Sun-like stars were selected from a very narrow parameter space around the solar properties. The authors also paid special attention to KIC 8006161, a very active metal-rich G dwarf, having compared its magnetic activity to that of stars with similar stellar fundamental parameters. They found that the amplitude of S_{ph} variability is strongly correlated with its mean value regardless of spectral type (see figure), similar to a relationship previously found for ground-based observations of chromospheric activity emission. While, depending on the phase of its activity cycle, the Sun is among the less active stars in the sample, the authors found that the $S_{\text{ph},\odot}$ properties are consistent with those observed for Kepler Sun-like stars. KIC 8006161 is, on the other hand, among the most active stars, which also tend to be metal-rich. This supports the interpretation that the strong activity of KIC 8006161 is a consequence of its high metallicity, which in turn affects the depth of the convection zone and, consequently, the efficiency of the underlying dynamo mechanism. A press release was issued by IA accompanying the publication of this article.

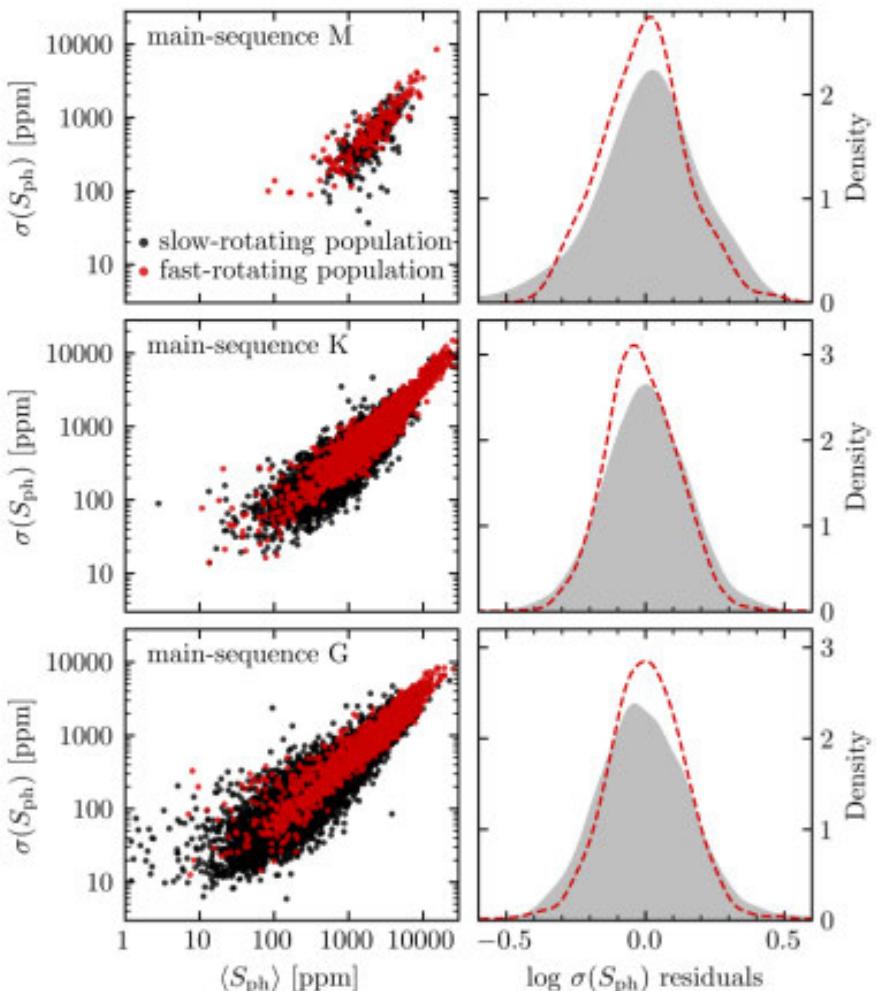

Figure 2: Relation between $\sigma(S_{\text{ph}})$ and $\langle S_{\text{ph}} \rangle$ for main-sequence GKM stars. From Santos et al. (2023).

Detailed seismic modelling of evolved RGB stars

Asteroseismology is playing an increasingly important role in the characterization of red giant host stars and their planetary systems. In Campante et al. (2023, The Astronomical Journal, 165, 214), the authors conduct detailed asteroseismic modelling of the evolved red giant branch (RGB) hosts KOI-3886 and Draconis, making use of end-of-mission Kepler (KOI-3886) and multisector TESS (Draconis) time-series photometry. They also model the benchmark star KIC 8410637, a member of an eclipsing binary, thus providing a direct test to the seismic determination. The authors aimed at testing the impact of adopting different sets of observed modes as seismic constraints. Given the very small spacing of adjacent dipole mixed modes in evolved RGB stars, the sparse set of observed g-dominated modes was not able to provide extra constraints,

further leading to highly multimodal posteriors (see figure below). Furthermore, they tested the impact of varying the atmospheric boundary condition in their stellar models. They found the mass and radius estimates to be insensitive to the description of the near-surface layers, at the expense of substantially changing both the near-surface structure of the best-fitting models and the values of associated parameters like the initial helium abundance, Y_i . Attempts to measure Y_i from seismic modelling of red giants may thus be systematically dependent on the choice of atmospheric physics.

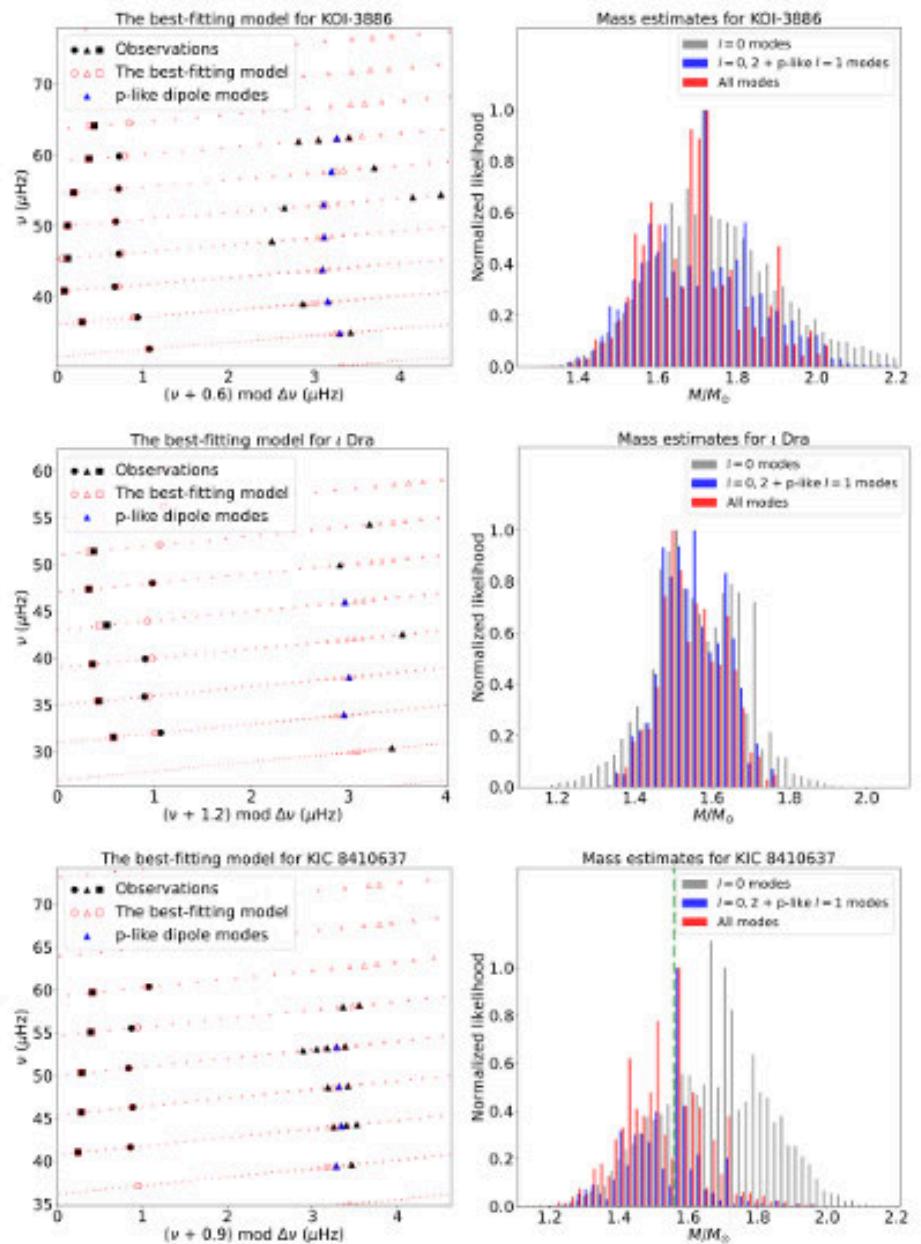

Figure 3: Left column: Échelle diagrams of the best-fitting models for (from top to bottom) KOI-3886, Dra, and KIC 8410637 constrained by all the observed mode frequencies (method “A”). Right column: Probability distributions for the stellar mass estimated using each of the three optimization methods (“0” in gray, “P” in blue, and “A” in red). The vertical dashed line in the bottom panel represents the dynamical mass of KIC 8410637. From Campante et al. (2023).

e-book: Challenges of asteroseismology in the era of space missions

New insights into the physics of stellar interiors and evolution are being made possible by asteroseismology. Moreover, asteroseismology is being increasingly applied to studies of Galactic archaeology, exoplanetary systems, and even tests of fundamental physics. Nevertheless, more data does not necessarily mean a better understanding, and there are long-standing problems that remain unresolved and others that have emerged as a result of the unprecedented quality of the data collected by space missions like CNES/ESA's CoRoT, and NASA's Kepler/K2 and TESS. In the e-book "Challenges of asteroseismology in the era of space missions" (Pascual Granado, Campante, García Hernández & Guo, Eds., 2023, *Frontiers in Astronomy and Space Sciences*), the editors aimed at providing contributing authors with an opportunity to publish studies that tackle unresolved problems in asteroseismology, doing so from an original perspective, be it of a theoretical or observational nature. The eleven articles published therein fulfil that role, making use of a diverse set of techniques while addressing a heterogeneous mix of subfields.

Other activities

We start by providing an overview of the group's internal procedures and meetings. Next, we highlight a number of indicators for the year 2023, namely, funded projects, completed theses, organisation of conferences and workshops, visiting scientists, and outreach activities.

Regular meetings and activities

We hold biweekly group meetings, a forum for discussing group-related issues and strategy. These are held together with the Journal Club. Moreover, we hold science meetings on a biweekly basis (alternating them with the group meetings), a forum for presenting and discussing ongoing work conducted by group members. In 2023, we had two more instalments of Stars Day (one in May and the other in December), a biannual in-person meeting with a strong social component. Stars Day events are fully organised by our students.

Communication

The group website is regularly updated, containing the latest group-related news as well as information on our research and other activities.

Funded projects (starting, finishing, or ongoing in 2023)

FCT R&D projects:

- 4 exploratory projects.

Cooperation projects:

- Space Weather Modeling: A Coupled Ionosphere-Thermosphere Physics-Based Approach – MIT Portugal Partnership 2030 (MPP2030).

Regional funding:

- AM Radio Signal Datalogger (AMANDA) — INOVC+.

European funding:

- Revealing the Milky Way with Gaia (MW-GAIA) — COST Action.
- Space Weather Awareness Training Network (SWATNet) — MSCA Innovative Training Network.
- SSA P3-SWE-XXXVII SWE Products for Southern Europe — Phase 1 (PROSE).

Completed theses

MSc:

- Anselmo Falorca. Title: Numerical simulations (HD and MHD) of planetary winds in the vicinity of stellar winds emanating from their host stars. Supervisors: João Lima and Adam Frank.
- Inês Rolo. Title: Application of realistic magnetic-cycle reconstruction to Sun-as-a-star observations. Supervisors: João Faria, Margarida Cunha, and Ângela Santos.
- Maria Ferreira. Title: Small separations in red-giant stars: quest for late evolution signatures using asteroseismology. Supervisors: Diego Bossini and Nuno Peixinho.
- Joana Pereira. Title: Variations of the ionospheric total electron content over continental Portugal and islands. Supervisors: Anna Morozova.
- Eva Silva. Title: Atividade cromosférica em estrelas evoluídas. Supervisors: Elisa Delgado Mena, João Gomes da Silva, and Ricardo Gafeira.
- Gabriela Lapa. Title: Impact of stellar activity on planetary habitability. Supervisors: Ângela Santos and João Fernandes.

Organization of conferences/meetings/workshops

- Space weather influence on the ionosphere and its potential threats to GNSS services — Online Workshop.
- NLTE Workshop 2023.
- 3rd Iberian Space Science Summer School (i4s).

Visiting scientists

- November 29-30. Paul Beck (Instituto de Astrofísica de Canarias, Spain).
- November 13-17. Morgan Deal (Université de Montpellier, France).
- September 25-28. Adam Frank (University of Rochester, USA).
- June 20-22. Mathieu Vrard (Observatoire de la Côte d'Azur, France).
- June 6-7. Evelyne Alecian (Université Grenoble Alpes, France).
- April 26-May 5. Joergen Christensen-Dalsgaard (Aarhus University, Denmark).
- March 20-24. Savita Mathur (Instituto de Astrofísica de Canarias, Spain).
- March 20-24. Rafael García (Université Paris-Saclay, France).
- January 23-27. Benard Nsamba (Max Planck Institute for Astrophysics, Germany; Kyambogo University, Uganda).
- January 9-12. Jose Carlos del Toro Iniesta (Instituto de Astrofísica de Andalucía, Spain).

Outreach (selected)

- 5 group-related press releases/news articles issued by the Science Communication Group at IA.
- Partnership with National Geographic Portugal: 1 article published by group members.

Tiago Campante

Group Leader

Report from the Group

The assembly history of galaxies resolved in space and time

In 2023, the Group continued to successfully implement its scientific strategy, making significant progress in investigating the formation history of galaxies and their structural components, the genesis and growth of supermassive black holes (SMBHs) in galactic nuclei and their influence on the assembly history of galaxies, the origin and implications of starburst activity and the influence of the environment on galaxy evolution.

These scientific objectives, pursued by a team of 12 researchers, 13 collaborators and 10 students, are served by the IA participation with leadership roles in the ESO instrument consortia of MOONS@VLT, BlueMUSE@VLT, MOSAIC@ELT of ESO, and ESA missions with key importance for the Group's strategy (Euclid, Athena), as well as by the parallel development of highly optimised computational tools for the scientific exploitation of multi-wavelength data for galaxies near and far.

The growth of SMBHs and their observational manifestations as Active Galactic Nuclei (AGN) is being investigated by the Group both at highest redshifts and in the nearby universe. The emergence of the very first powerful AGN in the Universe, and how they shaped the earliest galaxy evolution is being studied through sub-mm observations with IRAM and the revolutionary ALMA, and by post-processing cosmological simulations to obtain quantitative predictions on the number and detectability of early SMBHs at X-rays and radio wavelengths. Building upon its expertise on the analysis and interpretation of multi-wavelength data, and as part of a coherent strategic roadmap, the Group is developing new observational discriminators for the detection of proto-AGN at the Epoch of Reionization (EoR). It also acts as a strong driver in the development of ASKAP's Evolutionary Map of the Universe survey, through the IA-lead Key Science Project "Radio AGN in the EoR" and is represented at the Board and Science team level in ESA's future X-ray mission, Athena.

At low and intermediate redshift (z), the AGN phenomenon is being studied using the currently most powerful telescopes and instruments, most notably the Multi Unit Spectroscopic Explorer (MUSE) at ESO-VLT. Special emphasis is being laid on the study of quasars surrounded by gigantic Lyman- α halos and the definition of new diagnostics for constraining the physical conditions and excitation mechanisms in the nebular component of these extreme environments. This line of research is further supported by a comparative analysis of gas kinematics and excitation properties obtained from integral field spectroscopy (IFS) with predictions from cosmological simulations incorporating AGN feedback, and through IA's spectral synthesis code FADO. The latter, together with other IA-developed tools, are being used to prepare the scientific exploitation of MOONS (the Multi Object Optical and Near-infrared Spectrograph for the VLT), an instrument the IA co-leads and which is expected to start its operation at the end of 2024. During 2023, the team continued having a key involvement in the preparation of guaranteed time observations with MOONS and in the definition of strategies for the reduction and analysis of data from it. IA researchers assume major roles in several MOONS Science and Technical Working Groups (WGs), including the co-leadership of the AGN WG and the technical WG-1, and have an active role in the scientific WGs on Physics of the ISM, Passive galaxies and stellar continuum, Galaxy environment, Large-Scale Structures, High- z Universe and the EoR, Clusters/Protoclusters, and in the technical WGs on Mock Catalogues from Simulations, Determination of Redshift and Physical Parameters from Spectra, and on the Determination of Environmental Parameters.

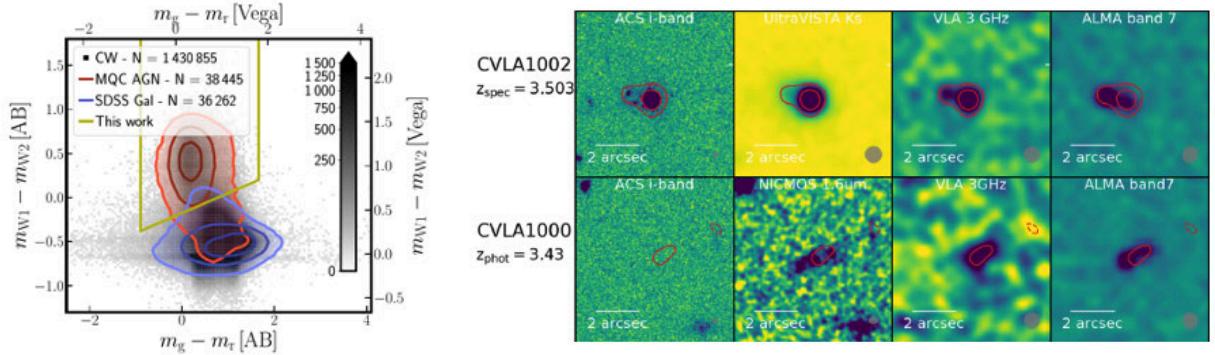

Another important field of the activities of the Group centres on spatially resolved investigations of galaxies with IFS and deep multi-band photometry. Using MUSE and the CALIFA and MaNGA IFS galaxy surveys, as well as data from the Hubble Space Telescope (HST) and the James Webb Space Telescope (JWST), team members are investigating a wide range of fundamental issues in extragalactic research, including the build-up history of galaxy bulges and the physical drivers of their inside-out star formation quenching, the spatial and temporal progression of starburst activity and starburst-driven feedback processes in galaxies, the mechanisms facilitating and regulating the escape of Lyman- α and Lyman-continuum radiation from galaxies, age and metallicity patterns in spiral and elliptical galaxies, cooling flows and ram pressure stripping effects in galaxy clusters, and the nature of ultra-faint galaxies. The activities of the team also encompass the development of Machine Learning tools for the identification of high- z AGN and the characterization of galaxies from the Euclid Galaxy Legacy Survey, which is co-led by IA.

Scientific Highlights for 2023

AGN and the growth of SMBHs since the Epoch of the Reionization

Over the past few years, the team has focused on the search for the earliest radio-powerful SMBHs. Extending work by Amarantidis et al. (2019), based on state-of-the-art galaxy formation models, and implementing prescriptions for the radio emission from SMBHs, has developed new radio multiwavelength selection and classification techniques and explored new samples of high- z radio galaxy candidates, using ALMA and HST observations to confirm some of the earliest radio-powerful galaxies currently known. The expertise gained showed us how to explore the highest redshifts and find some of the earliest AGN in the Universe, and we are now able to continue our efforts into the next generation of radio observations in the SKA-era.

A breakthrough development by our team in the selection of very high- z SMBHs was achieved by Carvajal et al. (2023). There, we developed a machine learning (ML) model capable of predicting which sources, detected at infrared wavelengths, are likely to be AGN and be detected in deep radio surveys. Quite importantly, this work led to a "machine-learning-assisted" definition of an optimal 4-band diagnostic for the identification of AGN (Fig. 1). We showed that the algorithm can also efficiently estimate redshift values for predicted radio AGNs, at the same level of accuracy as traditional photometric redshift techniques. Interestingly, the highest impact of this work is not only the prediction of radio-bright SMBHs, but also obtaining insight into the currently less known physical interplays between the properties of radio AGNs (e.g. mass of black hole, accretion rate, infrared and radio luminosities). This approach reflects our efforts in going beyond the usual blind application of ML algorithms, using them as guidance to better understand the physical processes at play in the phenomena being studied. We note that the criteria by Carvajal et al. are now used in the Evolutionary Map of the Universe Survey (EMU) Pilot Observations, and have already led to serendipitous discoveries.

Left: Separation of AGN from normal galaxies on a two-color diagram, constructed using ML tools (from Carvajal et al. 2023). This two-color diagnostic has been adopted by the EMU collaboration for the search of high-z active SMBHs and has already led to a number of serendipitous detections of such sources. right: Examples of the multi-wavelength analysis of $z > 3$ galaxies containing obscured star formation. The overlaid contours show the radio emission from VLA (from Amarantidis et al. 2023).

Recently, one of our PhD students (Barbosa et al. 2024, in preparation) showed that some radio-only techniques cannot be used effectively at the depth of EMU, as low-z star-forming galaxies appear to mimic the radio emission previously expected only from very distant AGN. This has led to an optimization of our AGN search strategies exploiting different combinations of available multiwavelength data. In Amarantidis et al. (2023) we explored a mixed far-infrared - radio technique to reveal a dusty galaxy population apparently growing quickly and hosting both an active SMBH and intense star formation. The team has been further working on a logical optimization of the AGN selection criteria by Amarantidis et al. (2023) to the highest-redshift regime, with the exploration of ALMA observations, a capability we have already built-up between 2014 and 2020 through the establishment and management of the Portuguese ALMA Regional Center. Finally, a parallel project (Matute et al., in prep.) uses unsupervised ML, specifically, Self-Organizing Maps (SOMs) to unlock hidden patterns in massive astronomical data sets and gain insights into the processes that drive accretion-powered nuclear activity from the earliest galaxies, now being detected by the JWST.

Physical characterization of high-redshift galaxies in the era of Euclid and JWST

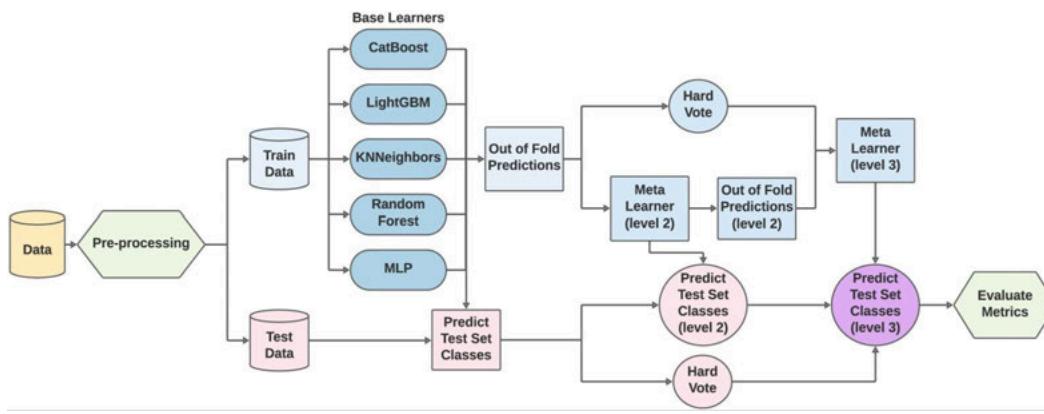

The advent of Euclid and JWST, and the availability of large multi-wavelength data sets for galaxies near and far have intensified activities by our team toward the physical characterization of high-z galaxies.

Galaxy characterization using Machine Learning algorithms

Several parallel efforts by our team have focused on the development of ML tools for the unambiguous identification of high-z AGN (Sect. 1) and the automated characterization of galaxies on the basis of their spectral energy distribution (SED) and morphology.

Building upon ML techniques for the classification of astronomical sources in Humphrey et al. 2022 and Cunha & Humphrey 2022, Humphrey et al. (2023) have developed a novel ML-based pipeline (ARIADNE)

for the selection of quiescent (non-star-forming) galaxies from Euclid broadband imaging data in combination with multi-wavelength photometry from other large surveys (e.g. the Rubin LSST). ARIADNE combines meta-learning to fuse decision-tree ensembles, nearest-neighbors, and deep-learning methods into a single classifier that yields significantly higher accuracy than any of the individual learning methods separately, and offers a powerful new tool for galaxy characterization.

Flow chart illustrating the overall learning algorithm used for the ARIADNE galaxy classification pipeline (from Humphrey et al. 2023).

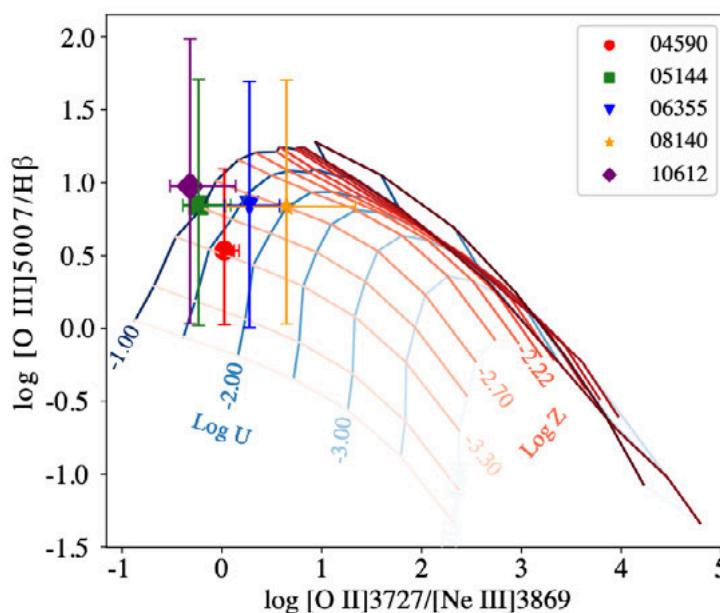

Another line of ML-supported research by the IA-Galaxies team centres on Lyman- α -emitting (LAE) galaxies. Paulino-Afonso, in the framework of the FLAEMING project that she initiated in 2022, has trained ML algorithms on multi-band galaxy surveys like COSMOS towards the identification of high-z LAE candidates. This project turned out to be particularly successful, as it permits LAE classification with approximately 90% accuracy using only optical and near-infrared fluxes. An application of this model to the COSMOS field has permitted the prediction of the existence of ~3500 new LAE candidates not detected by the SC4K survey, effectively doubling the existing sample of such sources. Two parallel projects, developed within MSc projects, used a) gradient-boosting algorithms trained from COSMOS2020 and SC4K to improve LAE identification, and b) Convolutional Neural Networks for the search of LAEs from broadband image data. These research activities strongly benefit from GPUs awarded to Paulino-Afonso through the NVIDIA Academic Hardware Grant Program.

In addition, it is worth noting the following spin-off projects inspired by the Group's research activities and consolidated expertise in ML: i) Paulino-Afonso is co-supervisor of an FCT-funded PhD thesis entitled "Precision Therapy using Cannabidiol and Terpenes in SARS-CoV-2" where the aim is to develop a ML/artificial intelligence model to support medicine strategies concerning therapeutic choice and follow-up; ii) Paulino-Afonso and Cunha submitted a successful application to the Artificial Intelligence in Cloud (2nd Edition) call with the title "AstroLingua: Empowering Inclusive Astronomy through AI" that was awarded a GPU-time-equivalent value of ~60 k€; This project, having its main focus on automated image captioning of galaxy images in Portuguese, will start early in 2024; iii) B. Arsioli applied statistical methods and ML tools developed in the context of his research on high-z blazars and AGN to a time-resolved morphological analysis of γ -ray emission from the Sun over the past 14 years. This led to the surprising discovery of an unexpected asymmetry in solar GeV emission with a surplus localised in the solar southern pole (Arsioli & Orlando 2023, submitted; further information is available [here](#)). This discovery has attracted considerable interest from the national and international astronomical

community, *inter alia* because the solar maximum in 2024 and the inversion of the Sun's magnetic poles will provide an important opportunity to study the evolution of the Sun's GeV asymmetry. It is worth noting that Arsioli's results have motivated a collaborative project between the extragalactic and stellar groups of IA.

Gas excitation mechanisms in high-z galaxies

Brinchmann (2023) has carried out a critical examination of galaxies with available JWST NIRSpec data at $1.2 < z < 8.5$. He devised a modification of the direct abundance determination method that reduces the dependence of metallicity estimates on flux calibration uncertainties by a factor ~ 3 . Two of the most important results from this study were that shocks provide a substantial contribution to the gas excitation in galaxies at $z \lesssim 3$. This study additionally demonstrated that studies of the mass-metallicity relation at higher z based on galaxy samples with detected auroral [OIII]4363 line emission can introduce serious biases, given that such galaxies form a special subclass of low-metallicity, high-excitation sources. This study has shown instead that Bayesian photoionization modelling of strong lines is preferable to using temperature-sensitive emission lines.

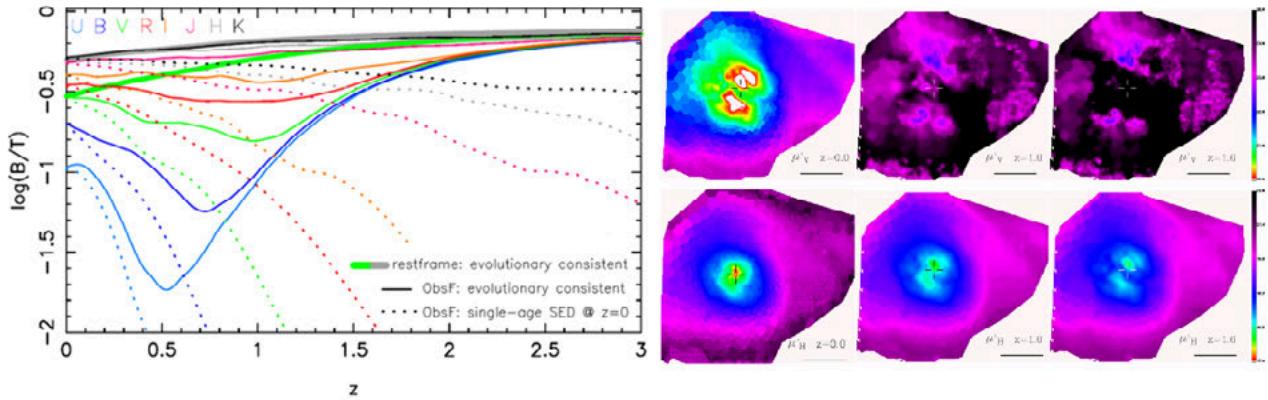

Comparison of the determined line ratios for the high- z galaxies studied by Brinchmann (2023) with photoionization models from Gutkin et al. (2016). The grid (reddish) lines correspond to the ionisation parameter U (metallicity Z).

Morphology, structural properties and color gradients of high-redshift galaxies: the chromatic surface brightness modulation (CMOD) effect

Papaderos, Östlin & Breda (2023) have investigated the connection between rest-frame and observer's frame (ObsF) morphological and structural properties of high- z galaxies using i) mock galaxy images computed with evolutionary synthesis models, and ii) a novel technique that predicts the rest-frame SED of galaxies in the UV on the basis of their spatially resolved star formation history (SFH), dust attenuation and nebular characteristics. The starting point of this project was that the shift of the rest-frame UV into the ObsF optical and near-infrared leads to a surface brightness enhancement (dimming) of the UV-bright (UV-faint) disk (bulge). This differential effect, dubbed chromatic surface brightness modulation (CMOD) by these researchers, results in a global change in the morphology, structural properties and

color patterns of high-z galaxies. For example, one implication of it is that old (UV-faint) bulges at z~1 almost disappear in the optical ObsF, potentially leading to the erroneous conclusion that spiral galaxies in this cosmic epoch have been pure disks, and bulge formation begun only ~8 Gyr ago. This misconception could then strongly bias our understanding of the co-evolution of bulges and SMBHs. This study also showed that “HST-dark” galaxies is a natural expectation from CMOD since even a low level of dust obscuration could lead to the virtual disappearance of the central part of a high-z galaxy.

left: Logarithm of the bulge-to-total (B/T) luminosity ratio vs. redshift z in different filters, as obtained from structural decomposition of synthetic galaxy images that take into account CMOD effects. Thin solid and dotted curves show the predicted ObsF B/T ratio from models assuming, respectively, a time-evolving and time-invariant SED, and thick curves the true (rest-frame) value in the V and H filter (green and gray, respectively). It can be seen that the B/T ratio of a spiral galaxy is strongly underestimated at $z \sim 1$. right: Simulated V and H images (upper and lower panel, respectively) of the ultraluminous infrared galaxy Arp 220 at $z = 0, 1$ and 1.6 (from left to right). The (achromatic) effect of cosmological dimming is not taken into account for the sake of better visualisation: the central part of the galaxy where dust obscuration is significant entirely evades detection in the optical at $z > 1$ (from Papaderos, Östlin & Breda 2023).

In a subsequent study, Papaderos & Östlin (2023, A&A submitted) have studied CMOD effects for starburst galaxies, i.e., systems with very high SF surface density and strong nebular emission. This study showed that color maps of high-z starburst galaxies are drastically affected by CMOD, in particular because of the luminosity contribution of strong emission lines moving in and out of filter transmission curves, depending on z . In the light of this study, the understanding and rectification of CMOD effects is a key prerequisite for fully unleashing the potential of JWST and Euclid for elucidating the starburst phenomenon and its role in the cosmic scenery.

Fundamental scaling relations and the physical drivers of star formation quenching in galaxies

In preparation for the spectroscopic investigation of evolutionary and chemical properties of galaxies in the critical cosmic epoch around $z \sim 1$ with the upcoming MOONS@VLT, the team has deepened its expertise in spectral modelling and studied in great detail fundamental scaling relations of galaxies in the low- z universe. Miranda et al. (2023) applied the IA-developed spectral synthesis code FADO (Gomes & Papaderos 2017) to study the slope and scatter of the “star formation main sequence”, placing particular attention to the self-consistent treatment of nebular emission as a prerequisite for the accurate determination of the star formation history (SFH) and stellar mass of star-forming galaxies through spectral modelling.

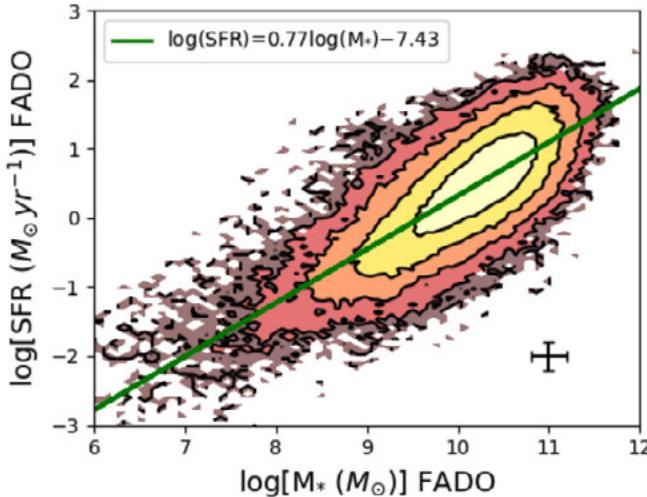

Figure: Star formation main sequence in the nearby universe ($< z > = 0.07$) as derived from spectral modelling of ~ 0.2 million galaxies from SDSS with FADO. The cross at the bottom-right corner depicts a median error, and contours delineate areas encompassing 20, 40, 60, 80, and 100% of the sample. A linear fit (equation in the upper-left corner) is shown with the green line (from Miranda et al. 2023).

A parallel project (Santos et al. 2023, A&A, submitted) addressed the influence of the nebular continuum on emission-line diagnostics and proposed a new spectroscopic classification scheme involving the H β equivalent width vs. the [OIII]5007/H β ratio, i.e., diagnostics better suited for studies of high-z galaxies where the H α and [NII]6584 line are inaccessible in the optical spectral range.

In addition, a slightly modified version of FADO in which a power-law component is self-consistently included in the spectral fit to approximate the featureless AGN continuum was tested on both synthetic and observed spectra of Seyfert 2 galaxies. A series of extensive tests has shown that this concept permits adequate first-order estimates of the spectral index of the AGN and its monochromatic luminosity contribution at 4020 Å (Chougule, PhD thesis, in prep.).

Finally, in anticipation of studies with MOONS of the physical mechanisms behind the gradual cessation (“quenching”) of star formation (SF) activity since $z \sim 1$, Breda & Papaderos (2023) investigated the dependence of the SF quenching timescale (τ) on the stellar surface density and galactocentric radius of galaxies. Observational constraints in this respect are crucial for disentangling rapid (< 0.5 Gyr) SF shut-off caused by negative AGN feedback from a gentle SF decline over several Gyr that likely reflects a gradual consumption of the available gas reservoir.

Finally, in anticipation of studies with MOONS of the physical mechanisms behind the gradual cessation (“quenching”) of star formation (SF) activity since $z \sim 1$, Breda & Papaderos (2023) investigated the dependence of the SF quenching timescale (τ) on the stellar surface density and galactocentric radius of galaxies. Observational constraints in this respect are crucial for disentangling rapid (< 0.5 Gyr) SF

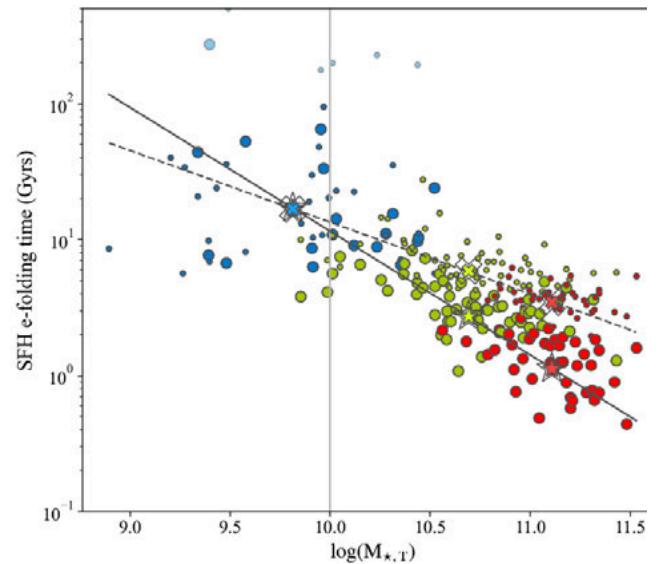

Fig. 7: e-folding time τ (Gyr) quantifying the duration of SF quenching in the bulge and disk component (large and small dots, respectively) of local spiral galaxies vs. logarithm of their present-day stellar mass M^* . Linear relations for both components are over-plotted (solid and dashed line, respectively). It can be appreciated from this diagram that the SF quenching timescale of galaxies is inversely related to M^* (from Breda & Pa-paderos 2023).

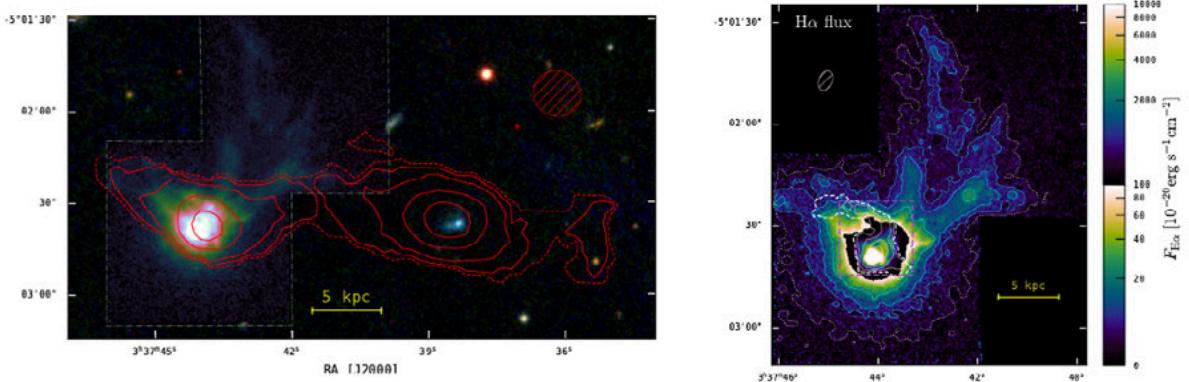

shut-off caused by negative AGN feedback from a gentle SF decline over several Gyr that likely reflects a gradual consumption of the available gas reservoir. This work, based on spectral modelling of nearly one million individual spaxels in 135 local galaxies from the CALIFA IFS survey, has allowed for the first time to define a semi-empirical parameterization of τ for both the bulge and the disk component of galaxies as a function of their total stellar mass.

Starburst activity and starburst-driven galactic outflows

Starburst activity, prevalent at high redshift, is a fundamental driver of the stellar mass growth and chemical enrichment of galaxies and likely the main driver of the escape of ionizing Lyman continuum (LyC) radiation that led to the reionization of the Universe. Hence, understanding the spatial and temporal progression of this phenomenon and its role in galaxy evolution is of utmost importance.

Starburst-driven galactic outflows are believed to play a critical role in the evolution of galaxies by regulating their mass build-up and star formation history. Theoretical models assume bipolar shapes for the outflows that extend well into the circumgalactic medium, up to tens of kiloparsecs (kpc) perpendicular to the galaxies. They have been directly observed in several local galaxies, however remained elusive in the high- z Universe. Recently, Guo ... Brinchmann et al. (2023, Nature) detected for the first time extended Mg II emission surrounding a sample of galaxies at $z \approx 1$ through ultra-deep IFS observations with MUSE@VLT. This discovery strongly suggests the presence of galactic winds reaching out to more than 10 kpc. Quite importantly, it revealed a strong dependence of the detected winds on galaxy orientation, with edge-on galaxies clearly showing enhanced Mg II emission along the minor axis, whereas face-on galaxies show much weaker and more isotropic emission. This is an important observational proof that bipolar gas outflows develop perpendicular to galactic disks and are prevalent among young galaxies with very active star formation in the early Universe.

Low-mass starburst galaxies in the nearby Universe (see recent review by the team member P. Lagos in National Geographic Portugal) offer the possibility to study such galactic outflows at a much better spatial resolution than possible at high redshift. One such example is the extremely metal-poor blue compact dwarf (BCD) galaxy SBS 0335-052E in which very deep MUSE@VLT observations allowed the detection of a spectacular 15 kpc outflow by Herenz ... Papaderos et al. (2023). A combined interpretation of IFS data with HI interferometric data from the VLA suggests that LyC radiation produced by massive young stellar clusters in this BCD is escaping anisotropically. Anisotropic LyC photon escape, if common at high z , may have major implications for our understanding of the role of low-mass starburst galaxies on the reionization of the Universe.

left: HI VLA map of SBS 0335-052E and its faint western companion (from Herenz ... Papaderos et al. 2023). right: Continuum-subtracted H α narrowband image of SBS 0335-052E revealing a spectacular starburst-driven outflow protruding out to 15 kpc from the galaxy.

Within the CLASSY project, a series of detailed studies dedicated to the mechanisms that facilitate the escape of LyC and Ly α radiation from starburst galaxies were carried out. In particular, Hu ...

Brinchmann et al. (2023) found an inverse relation between Ly α -peak separation and the [OIII]/[OII] flux ratio, confirming that the covering fraction of LyC-thin sightlines increases as the Ly α peak separation decreases. This study has also devised a new diagnostic for LyC-leaking galaxies that combines the Ly α peak separation and the Ly α red-peak asymmetry. These studies were supplemented by the search for extreme emission-line galaxies at high z as probable sources of Lyman photon escape. Maseda ...

Brinchmann et al. (2023) have detected with MUSE and JWST/NIRSpec a population of low-mass galaxies ($MUV \approx -15$; $0.01 L_*$) at $2.9 < z < 6.7$ with very strong Ly α emission and no detectable continuum. The Ly α equivalent widths (EWs) of these LAEs can exceed 100–200 Å, implying strong starburst activity and a very low level of metal enrichment.

Further studies of galaxies with intense SF were dedicated to the cometary BCD NGC 4861 (Roche ... Papaderos et al. 2023), jellyfish galaxies (Azevedo ... Gomes et al. 2023), and the extremely metal-deficient BCD CGCG007-025. SF feedback and its connection with nebular kinematics were studied in this system by Valle-Espinosa ... Papaderos (2023) with MUSE and involved kinematical decomposition of strong emission lines. This analysis revealed complex kinematics in the ionized gas and the presence of a highly turbulent medium with a velocity dispersion of up to 1000 km/s, witnessing the release of energy and momentum by stellar winds and SNe. It also documented a spatial anti-correlation between SF surface density and gas-phase metallicity, which is consistent with accretion of metal-poor gas from the cosmic web as a possible triggering mechanism for the ongoing starburst episode. Further insights into the nebular properties of CGCG 007-025 were gained in Fernández ... Papaderos (2023). This study used deep optical spectra with the 10.4m GTC, in conjunction with FADO and a novel neural network sampler to explore the SFH and derive spatially resolved maps of the metallicity and the ionisation parameter.

Finally, the team's recent studies on star-forming dwarf galaxies include a new catalogue of relatively isolated metal-rich blue dwarf galaxies from SDSS that addresses the environmental properties of the sample galaxies and their position on the mass-metallicity relation (Guo ... Scott, Lagos et al. 2023a). This study suggests that the chemical self-enrichment of these systems is internally driven by episodic mild episodes of SF rather than external interactions. Further support for this conclusion came from an

in-depth optical and HI study of one isolated near-solar metallicity dwarf galaxy from this sample (Guo ... Scott, Lagos et al. 2023b) which ruled out the hypothesis that this system is a tidal dwarf galaxy.

The least massive dwarf galaxies as laboratories of galaxy formation

Vaz, Brinchmann et al. (2023) have studied with MUSE Leo T ($MV = -8.0$ mag), a peculiar dwarf galaxy that stands out for being both the faintest and the least massive galaxy known to contain neutral gas and to display signs of recent SF. It is also extremely dark matter-dominated. As a result, Leo T presents an invaluable opportunity to study the processes of gas and star formation at the limit where galaxies are found to have rejuvenating episodes of SF.

A surprising result from this study was that the galaxy consists of two stellar populations, a young (<500 Myr) and old (5-10 Gyr) stellar component, with the latter characterised by a factor of ~4 higher velocity dispersion. This observational insight holds important clues to the star formation history and dynamical evolution of the least massive galaxies in the local universe.

Júlio, Brinchmann et al. (2023) have studied with MUSE stellar line-of-sight velocities in the faint dwarf galaxy Antlia B with the aim to derive constraints on the fundamental properties of scalar field dark matter (SFDM), which was originally proposed to solve the small-scale problems faced by cold dark matter models. Based on measurements of 127 individual stars with MUSE, they modelled the dark matter density profile of the galaxy and found that the scale for repulsive self-interaction of the SFDM model is $\lesssim 180$ pc, which is inconsistent with the value required to match observations of dwarf galaxies in the Local Group. This implies that the central cores in the dark matter profile of these systems are not caused by SFDM.

Group meetings, Journal Clubs and other activities

In 2023, the team significantly increased its productivity, further strengthened internal synergies, and established new collaborations. Throughout this year the team maintained a busy schedule of weekly briefings to discuss its scientific work. In addition, regular weekly journal clubs continued, where the latest scientific results, mostly non-IA, were discussed. In addition, the team organized two internal workshops (in Porto and Coimbra, respectively, in June and September) to discuss current research and key objectives for the coming years.

The dynamism of the team is also reflected in the continuous development and intensive scientific exploitation of machine learning tools that will strongly support its scientific activities within Euclid, JWST, MOONS@VLT, MOSAIC@ELT and BlueMUSE@VLT, as well as in the co-organization of the conferences “Escape of Lyman radiation from galactic labyrinths” (Crete, April 2023), and the upcoming “Science with the Hubble and James Webb Space Telescopes VII: Stars, Gas & Dust in the Universe” and “Beyond the Edge of the Universe: Latest results from the deepest astronomical surveys” (to be held in Porto and Sintra, respectively, in spring and autumn 2024).

Report from the Group

Unveiling the dynamics of the Universe

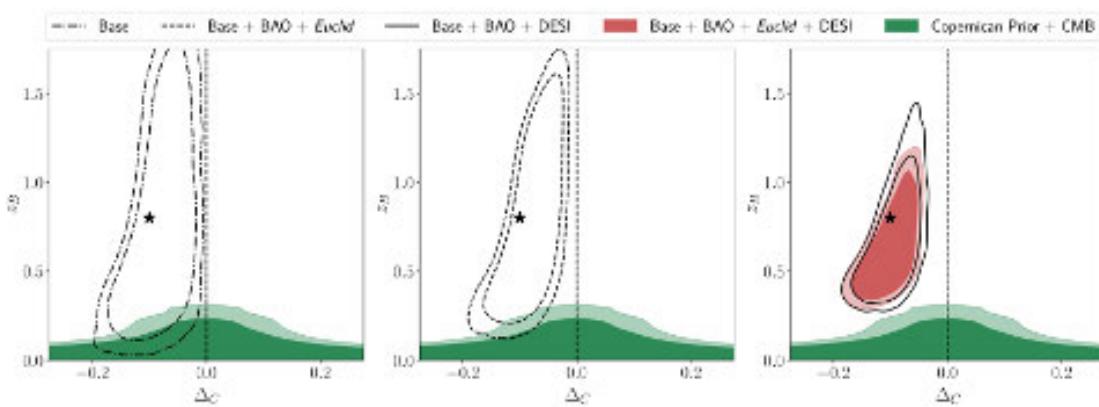

The activity of the cosmology group was focused on testing the validity of the current standard cosmological model, looking to answer the question: Do we need new physics to understand the Universe? Specifically, does Einstein's general relativity accurately describe gravitation? Is a cosmological constant the correct explanation for the currently observed accelerated expansion of the Universe? Is the Standard Model of particle physics all we need to adequately describe the early Universe? We do this by exploring tests to Einstein's general relativity, delving into the detailed structure of the dark sector and investigating observational signatures of topological defects networks. Our contributions involve our continuing participation in various international consortia. ESA's Euclid mission (in operation), LISA (2035 launch), ESO's ESPRESSO (in operation) and ANDES (2028). This year the team centred its activities on:

1. Euclid is a mission dedicated to the exploration of the dark universe through the measurement of the properties of the cosmological large-scale structure. IA is strongly involved in this mission, participating in the consortium board, in various Science Working Groups and in the Survey Design. Our participation in the consortium last year was focused on producing Euclid forecasts. Our team was involved in testing the Copernican principle, the use of higher order weak lensing statistics and constraints on modified gravity models.
2. Putting the present standard cosmological constant model to the test is one of the strongest objectives of our group. Towards this goal, we explored extensions to Einstein's general relativity and their observational signatures and worked on observational signatures of dynamical dark energy models with couplings to the dark matter, or to neutrinos. Most of this work is aligned with the goals of the BEYLA FCT project.
3. The first detection of gravitational waves in 2015 opened a new era for astronomical observations. Several of our members have dedicated their time to studying the stochastic gravitational wave background that can be generated from topological defects, namely cosmic strings and domain wall networks. This background can possibly be detected by the LISA space telescope and building a database of cosmic string signals is crucial towards this goal.
4. The observational measurement of the fine structure constant at different redshifts presents a direct form of testing the validity of its constancy. This is something that the ESPRESSO spectrograph is particularly suited to doing and will be significantly improved with ANDES. With ANDES there is also the possibility of a direct measurement of the expansion rate of the Universe from observing the redshift drift. Several of our members have been directly involved in exploring these possibilities.

Scientific highlights for 2023

Euclid: Testing the Copernican principle with next-generation surveys

The Copernican principle, the notion that we are not at a special location in the Universe, is one of the cornerstones of modern cosmology. Its violation would invalidate the Friedmann-Lemaître-Robertson-Walker metric, causing a major change in our understanding of the Universe. In the publication “Euclid: Testing the Copernican principle with next-generation surveys”, Camarena et al. (2023, A&A 671, A68) constraints on an inhomogeneous Lemaître-Tolman-Bondi model with a cosmological constant were forecast for combinations of present data with simulated Euclid data. It was shown that for a Λ CDM fiducial model Euclid data will improve present constraints by around 30%, with some variation dependent on the observables and scales considered.

A comparison between present and mock datasets constraints on the two parameters z_B and ΔC that classify the profile of the inhomogeneity in a specific Λ LTB model. The star depicts the fiducial model at $\Delta C = -0.1$ and $z_B = 0.8$.

Fundamental cosmology from ANDES precision spectroscopy

Fundamental cosmology observations, such as the detection of the redshift drift and tests of the universality of physical laws, are key science and design drivers of the ArmazoNes high Dispersion Echelle Spectrograph (ANDES), an Extremely Large Telescope instrument.

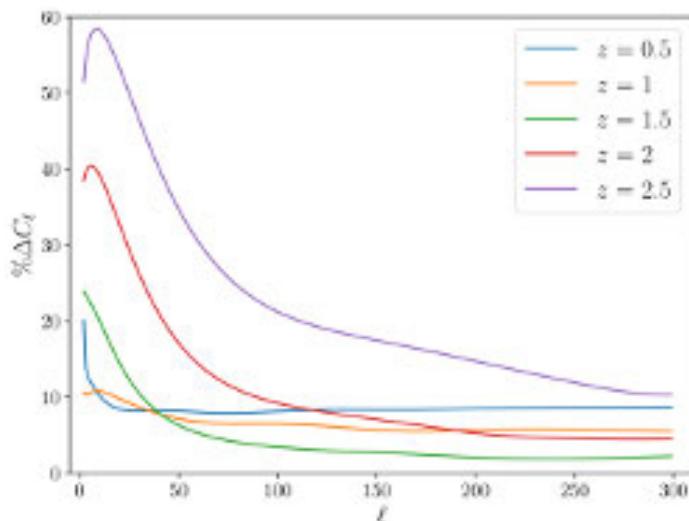

In the work “Fundamental cosmology from ANDES precision spectroscopy”, Marques et al., (2023, MNRAS, 522, 4, 5937), Fisher matrix forecast tools combining both observables were developed. This demonstrates a possible synergy between the two ANDES datasets, quantifying the improvements in the constraints and working towards optimizing ANDES observation strategy.

Cosmology with the Laser Interferometer Space Antenna

The Laser Interferometer Space Antenna (LISA) has two primary cosmological goals: to probe the expansion rate of the universe and to understand stochastic gravitational-wave backgrounds and their implication to our knowledge of the early universe and its relation to particle physics. This white paper publication from the Cosmology working group in LISA, Auclair et al., Living Reviews in Rel. (2023) 26, 1, 5 presents a summary of the state of the art in LISA cosmology. Our group was particularly involved in the work on the topological defects background and on the use of standard sirens to probe the dark sector.

The observed number counts in luminosity distance

Next generation surveys will give us unprecedented detections of supernovae Type Ia and gravitational wave merger events. Cross-correlations of such objects offer novel and powerful insights into the large-scale distribution of matter in the universe. Both sources carry information on their luminosity distance but remain uninformative about their redshifts; hence their clustering analyses and cross-correlations must be done in luminosity distance space, as opposed to redshift space. In the paper “The observed number counts in luminosity distance”, Fonseca et al. (2023, JCAP 08, 050), the full expression for the number count fluctuation in terms of a perturbation to the observed luminosity distance was calculated. The expression was found to differ significantly from the one commonly used in redshift space. Furthermore, a comparison of the number count angular power spectra between luminosity distance and redshift spaces was presented. We see a wide divergence between the two at large scales, and lensing seems to be the main contribution to such differences. On such scales and at higher redshifts the difference between the angular power spectra in luminosity distance and redshift spaces can be roughly 50%. The conclusion is that in a cosmic variance limited survey, the relativistic corrections to the density-only term ought to be included.

Percentage difference between the angular power spectrum in luminosity distance space and redshift space for a $\sigma = 0.2$ binning. At high redshift lower ℓ can differ substantially. Smaller scales with higher values of ℓ exhibit a milder effect. This difference is also impacted by the binning used, improving for smaller bin size.

Group meetings, Journal Clubs and other activities

The group has regular weekly journal club meetings, our “Cosmoclub”. These are in person in both nodes with an online zoom connection. Every week we have a general discussion, and a different team member brings one paper (or more) for discussion. Details can be found in <http://ia-cosmoclub.wikidot.com/>.

We participated in the international Cosmoverse meeting that took place at FCUL in Lisbon, on 30 May to 1 June 2023. This was a meeting within the framework of the Cosmoverse e-COST action from the EU.

The cosmology group also organised COSMONATA, the annual meeting in late December bringing together Portuguese researchers working abroad with researchers in Portugal.

Team members were also actively engaged throughout 2022 in several outreach activities, including talks given in schools. Most of these activities are developed with the Science Communication Team.

Tiago Barreiro

Group Leader

Report from the Group

Astronomical Instrumentation and Systems

The year 2023 was a very intense period for the group, with some projects reaching their final stages and others beginning the detailed design phases, which usually involve additional effort and dedication.

As seen in this report, there was significant progress during this year, achieving some important milestones in several projects and starting promising future ones.

During 2023, the following instruments had engineering and implementation activities at IA:

- For the European Southern Observatory (ESO): MOONS, ANDES, BlueMUSE and PoET.
- For the European Space Agency (ESA): EUCLID, CHEOPS, PLATO, ARIEL and ATHENA.

Currently the AISG participates in a considerable number of projects, involving all its human resources. This includes not only the technical design of the instruments themselves but also the respective science exploration of the collected data through big collaboration projects such as consortiums and surveys. Its importance stems from the need to secure privileged access to existing and future facilities of the European Organization for Astronomical Research in the Southern Hemisphere (ESO) and of the European Space Agency (ESA) and to contribute to the long-term development of Astronomy in Portugal.

In terms of Human Resources, the group currently has a handicap on the Mechanical Engineering side, a problem to be solved in the start of 2024 with the opening of a technical position in this area. On the software side, a new member has reinforced the team.

The current composition of the AISG is:

Researchers (PhDs)	Others	PhD Students
• Alexandre Cabral	• António Joaquim	• André Miguel Silva * (PhD student since 01/10/2019)
• Bachar Wehbe	Marques de Oliveira	• Cédric Pereira (PhD student since 01/10/2019)
• David Alves	• Manuel Monteiro	• Inês Leite (PhD student since 01/10/2021)
• Elena Duarte		• Nuno Gonçalves (PhD student since 01/10/2021)
• João Dinis		• Joel Filho * (PhD student since 01/09/2022)
• João Coelho		
• Jorge Gameiro		
• José M. Rebordão		
• Manuel Abreu		
• Sérgio A. G. Sousa *		
• Nuno Peixinho *		

*Researchers that work in more than one group are marked with (*).*

In terms of new themes of research, somehow supported by background expertise in Astronomy Instruments / Space missions and consolidated by the work PhD students supervised by AISG researchers, the team is exploring:

- a) Stabilisation of calibration light sources for High Accuracy Photometry Instruments resulting from research and develop a device that senses the light source fluctuations and modulates the beam, both in flux and in spectra, to produce a sufficiently stable source, a truly impressive challenge when stabilisation levels of few ppm are required over long periods of observation.
- b) Discovery and characterization of temperate Earth-like worlds with ESPRESSO, with a main goal to improve the radial velocity extraction from the ESPRESSO science data. This is a module to be attached to the Data reduction pipeline of ESPRESSO. This thesis is more focused on the analysis of M stars which are trickier to get precise and stable radial velocities for the detection of exoplanets, but at the same time are the more promising targets to find earth-like in the habitable zone.
- c) Development of a solar telescope that will allow the detailed study of the Sun (using it as a proxy to understand the sources of noise that affect the observations of other stars). For that, it is fundamental to be able to obtain disk-resolved, HR spectra, opening a whole new path for the detection and characterization of Earth-like planets orbiting other Suns.
- d) Development of miniaturised Cross dispersed echelle spectrographs operating in the VIS and UV with the Size Weight and Power (SWaP) requirements for a SmallSat solution and the required spectral resolution to allow the study of this less explored spectral range.
- e) Study of space debris detection algorithms in a standalone platform, with the goal to implement and test a star tracker that can be used for space debris detection. The methodological approach consists of selecting the most appropriate debris detection algorithms, adding automatic photometry measurements, developing a standalone platform, implementing the algorithms in the platform, selecting the low-cost materials capable of withstanding the harsh space environment, and optimizing the algorithms to work in different scenarios.

In the following we list the detailed activity in each of the running projects.

Summary of instrumentation projects

MOONS (ESO)

The Multi-Object Optical and Near-infrared Spectrograph (MOONS) is a future third-generation instrument for the Very Large Telescope (VLT) to have first light by 2023. It matches an enormous multiplexing capability, reaching up to 1000 positions being spectroscopically observed at the same time over a single telescope pointing, to the grasp of the 8.2m VLT, making it a unique instrument for deep galaxy surveys.

The subsystems under IA responsibility are the MOONS Rotating Front End (RFE) and the Field Corrector (1 m diameter set of two lenses).

In 2023, after the RFE was delivered to UKATC in Scotland in the end of 2022, the IA team did 4 missions in UKATC to integrate all the sub-systems that the RFE will support and to perform all the performance tests. All the 4 mission were very successful, ending in November with the integration of the Focal Plate Module, the critical core of the front end with its 1000 robot fibre positioners (under the responsibility of UKATC) into the RFE structure.

The first semester of 2024 will see the conclusion of the MOONS integrations and tests towards the Preliminary Acceptance in Europe, before the shipping to Paranal in the second semester.

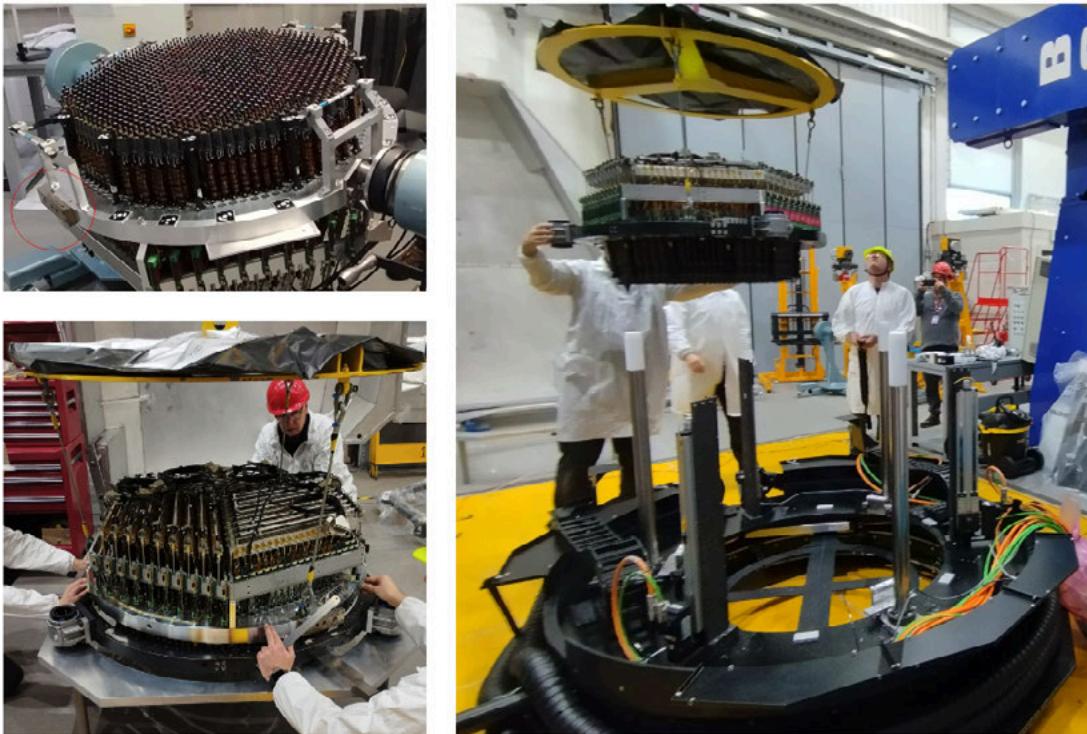

Figure: The MOONS (ESO) RFE during the integration for the Focal Plane Module.

ANDES (ESO)

ANDES, formerly known as HIRES, is the project for a high resolution spectrograph to be installed at the ESO E-ELT telescope. The concept of ANDES is being developed by a consortium that comprises several institutes in different European countries, as well as USA, Canada, Brazil and Chile. The Portuguese participation in this consortium is done through IA that is leading the “front end” work package component of the instrument, the data reduction and analysis software, the software system architecture, and the science drivers for the project. The group also participates in the management of the consortium, having several key persons.

2023 was a very busy successful year for ANDES. The team participated in the preparation of all the documentation package that was sent to ESO regarding the System Architecture Review (SAR). The review was held in ESO's headquarters in Germany on October 17-18, 2023, with the participation of the IA instrumentation team.

On November 15, 2023, ANDES received the certificate of provisional acceptance (PVA) of the SAR, which officially closes the Phase B1 contract with ESO. ESO has granted the PVA without reservation and offered the consortium one night of Guaranteed Time Observation (GTO) on one of the instruments at the ELT telescope in return for the consortium's contribution to the System Architecture Review.

Another milestone, with high importance for the FE, was achieved. The team submitted a change request to ESO to change the architecture of the FE structure. Since we will no longer need the possibility to observe two targets simultaneously, that led to huge simplification to the FE. We no

longer need the rotating structure, and we will now adapt the fixed structure architecture. The change request was recently approved by ESO.

On top of these two milestones, the FE team organised and participated in several working meetings (in Italy, and in Portugal). The team is also preparing the documentation package for the subsystems preliminary design review that will be held in October 2024.

PoET (ESO)

The detection and characterisation of other Earths, planets with the physical conditions to hold liquid water and thus potential life-sustaining environments, is a bold objective of present-day astrophysics. This quest is however severely challenged by astrophysical “noise” from the host stars. To approach this problem, we started in 2022 a new project to build a dedicated facility, the Paranal solar Espresso Telescope (PoET). This telescope will be linked to the ESPRESSO spectrograph (ESO) and allow simultaneous acquisition of disk-integrated (sun-as-a-star) and arcsecond level disk-resolved observations of the Sun at a spectral resolution R~200000. The project is funded by the European Union (ERC, FIERCE, 101052347). And it is a Portuguese project.

During 2023, the project had its first full year of work, ending with the delivery of the “PoET Design and Interface Report” that will be reviewed by ESO in the beginning of 2024, followed by the final design and construction phase.

BlueMUSE (ESO)

IA has been invited to participate in the ESO-BLueMUSE instrument, which is a blue-optimised, medium spectral resolution, panoramic integral field spectrograph based on the MUSE instrument, proposed for the Very Large Telescope (installed at Nasmyth platform level). Phase A of this project is scheduled for the beginning of 2024, but preparatory works already took place during 2023.

With an optimised transmission down to 350 nm, BlueMUSE builds upon the heritage of MUSE but includes both obvious and novel improvements (e.g., improved stability with better temperature control and automated alignment processes). Along with all the core subsystems supporting the increased performance of BlueMUSE, the instrument shall be managed at hardware and software level according to the new standards currently in use at the VLT.

The Instrumentation team of IA will be responsible for the Instrument Control Electronics and for the Instrument Control Software of the full instrument.

Euclid (ESA)

Euclid is ESA's mission dedicated to the exploration of the dark universe through the measurement of the properties of the cosmological large-scale structure. IA is strongly involved in this mission, participating in the consortium board, in the consortium coordination group, in various science working groups, and leading the Survey operations support team.

In 2023, IA's Instrumentation and Systems Group continued its long-standing participation in the preparation of the Survey Design, focusing on the development of the ECTile software. This software computes the mission's Reference Survey, i.e., it produces schedules of the Euclid Deep and Wide

surveys, including implementation of all calibrations, that are compliant with all constraints and requirements. The IA-computed reference survey is the basis of the operational survey to be executed by the Euclid satellite during the nominal science observations phase (NSOP).

During the first half of the year, we further consolidated ECTile as an operational tool. This included the incorporation of precise on-target times specified in the observation configuration files, the usage of proper motion of blinding stars when tessellating the sky, updating to new calibration specifications, implementation of a refined region-of-interest, new computation of the Euclid common FoV. In addition a new tool was developed to schedule some of the observations of the performance verification phase (PV). These activities led to the generation of two surveys RSD2023A and B. A workshop on ECTile usage and RSD generation was organized in FCUL (May 2023) to Euclid consortium and ESA users.

On July 1st, Euclid was successfully launched. The launch was followed by commissioning, then the PV phase and finally the Wave Front Error campaign (WFE), prior to the NSOP scheduled to start on February 2024. Measurements in these early observing phases led to changes in some of the operational specifications. In particular, the telescope orientation was strongly restricted which invalidated the usage of RSD2023A and B in the NSOP. The second half of the year was dedicated to modifying ECTile to cope with the new unforeseen requirements. This included adding the capability of placing tilted FoVs and adapting the algorithms to cope with them. In addition, ECTile was adapted to consider a specific orbit file in its computations. A test survey, RSD2023C, was generated with the modified ECTile. The final month of the year was dedicated to the computation of RSD2024A, the first RSD version to be used for NSOP.

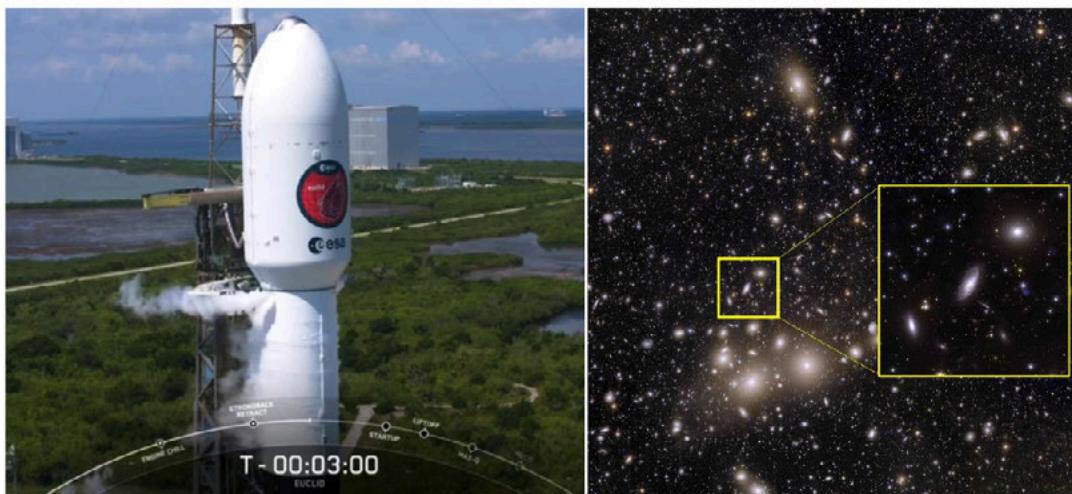

Figure: (Left) (Launch: July 1st 2023, Euclid launch countdown. The nose cone enclosing the Euclid spacecraft sits on top of the Falcon 9 rocket on platform 40 of the Kennedy Space Center, 3 seconds to launch. (Right) Perseus: The first Euclid science images were released on November 7th 2023. This image of the Perseus Cluster shows 1000 galaxies belonging to the cluster, and more than 100 000 additional galaxies further away in the background. The full cluster is contained in the Euclid wide field-of-view, and the whole area is imaged with high resolution as shown in the cut-out. This image showcases the power of Euclid: to obtain extremely sharp images of the distant Universe over a large region of the sky in one single pointing.

CHEOPS (ESA)

The Characterising Exoplanet Satellite (CHEOPS) is the first mission dedicated to search for transits of exoplanets by means of ultrahigh precision photometry on bright stars already known to host planets. It will provide the unique capability of determining accurate radii for a subset of those planets for which the mass has already been estimated from ground-based spectroscopic surveys. CHEOPS will also provide prime targets for future instruments suited to the spectroscopic characterization of exoplanetary atmospheres. IA is strongly contributing for this mission participating both in the board and the core science team of the mission. This work is also closely related with the science data archive which is being developed by our industry partners (DEIMOS), contributing to the development of stronger relations with the Portuguese industry in the area of scientific related software.

Moreover there is a contribution for the mission science operation centre, more specifically for the CHEOPS data reduction pipeline where we were responsible for the calibration of the pipeline until the end of the nominal mission.

In 2023, CHEOPS continued to run well within specifications and continues to get scientific observations of high precision. IA continued to give maintenance support to the data reduction pipeline during the CHEOPS nominal mission until September 2023. With the end of the nominal mission and the start of the extension of the mission we took the responsibility for the maintenance of the full data reduction software where we will need to deal with the ageing of the instrument. During this year we also signed the contract for the funding of this task through Prodex. The proposal will allow hiring a dedicated person to this task for which a call was already issued in December 2023. It is expected that the hired person will start working on this in the beginning of the next year.

PLATO (ESA)

The PLATO mission, whose main scientific focus is the detection and characterization of extra-solar planets orbiting nearby, bright stars, using the transit method, as well as the detailed characterization of their host stars through asteroseismology, was adopted by ESA in June 2017. The instrumentation team has leadership of several work packages for the development of software for the Plato Data Center (PDC) as well as in the development of the Optical Ground Segment (OGSE) component to test and calibrate the PLATO cameras on ground.

Regarding the activity for the OGSE work package, two units were already delivered and commissioned to the Centre Spatial de Liège (CSL), and during the year of 2023, the team has as main activity the support and maintenance of the two units that are now fully integrated in the PLATO cameras integration and testing work path. In this scope, the IA team assured remote assistance and support to the CSL team, analysing log data generated by housekeeping processes running in our unit. During the past year, the main problem encountered was associated with a broken optical fibre which was promptly replaced by a spare item.

As referred to in the previous report, ESA contracted us to produce a 3rd unit of the collimator, which was adapted to different light sources, and whose objective was to provide ESA with extra camera testing capability, reinforcing the different test houses resources.

This collimator was commissioned in August 2023 and successfully tested with a PLATO EM camera.

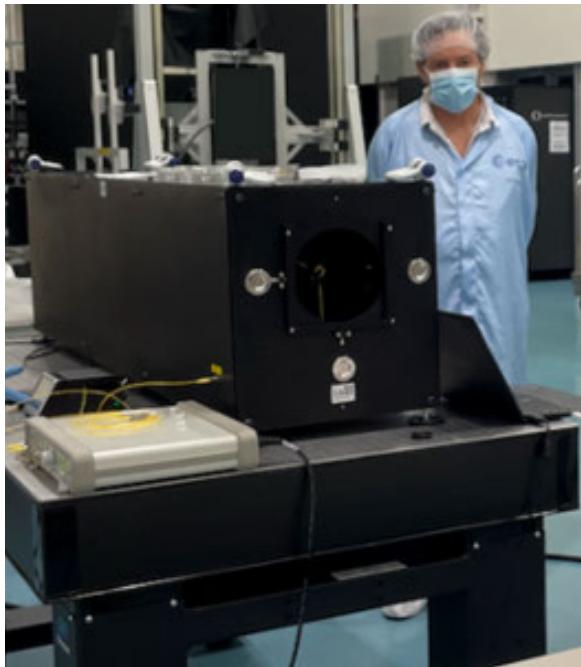

Figure: Plato OGSE in test before installation at ESA.

ARIEL (ESA)

ARIEL (Atmospheric Remote-sensing Exoplanet Large-survey) was one of the three candidate missions selected by the European Space Agency (ESA) for its next medium-class science mission due for launch in 2028. The goal of the ARIEL mission is to investigate the atmospheres of several hundred planets orbiting distant stars in order to address the fundamental questions on how planetary systems form and evolve.

The main activities Instrumentation group in ARIEL, and together with the OGSE team led by Oxford University, were associated to the design of part of OGSE system, associated to the illumination module and reference detector subsystem working in the Visible /Near Infrared part of the spectrum. The reference detector function is to monitor the light source fluctuations and to provide source stability data required to detrend the results from the ARIEL instruments during calibration and verification procedure.

The work performed during the period of this activity reporting refers to all the tasks regarding the preparation of the CDR, which should have happened during 2023 but, for reasons external to the OGSE team, is being scheduled for the end of the 1st semester of 2024.

During this last year the OGSE team adapted the previous design to current OGSE configuration, namely with the substitution of the “target projector unit” with the “periscope unit”. This is the subsystem that interfaces the OGSE with the Ariel M1 mirror.

A considerable effort was also focused on the interface of the ambient optical bench (where all the illumination sources sit) with the Integrating Sphere (vacuum and cryo conditions), mainly due to the need to cope with significant thermoelastic deformations arising during the cool-down process.

In terms of the development of hardware, the PCB circuits for the reference detectors pre-amplifiers were designed and tested in real operating conditions (vacuum and 70 K temperature ambient) to be

able to evaluate its noise characteristics. The best amplifier / reference detector pair was chosen based on its performance in these working conditions.

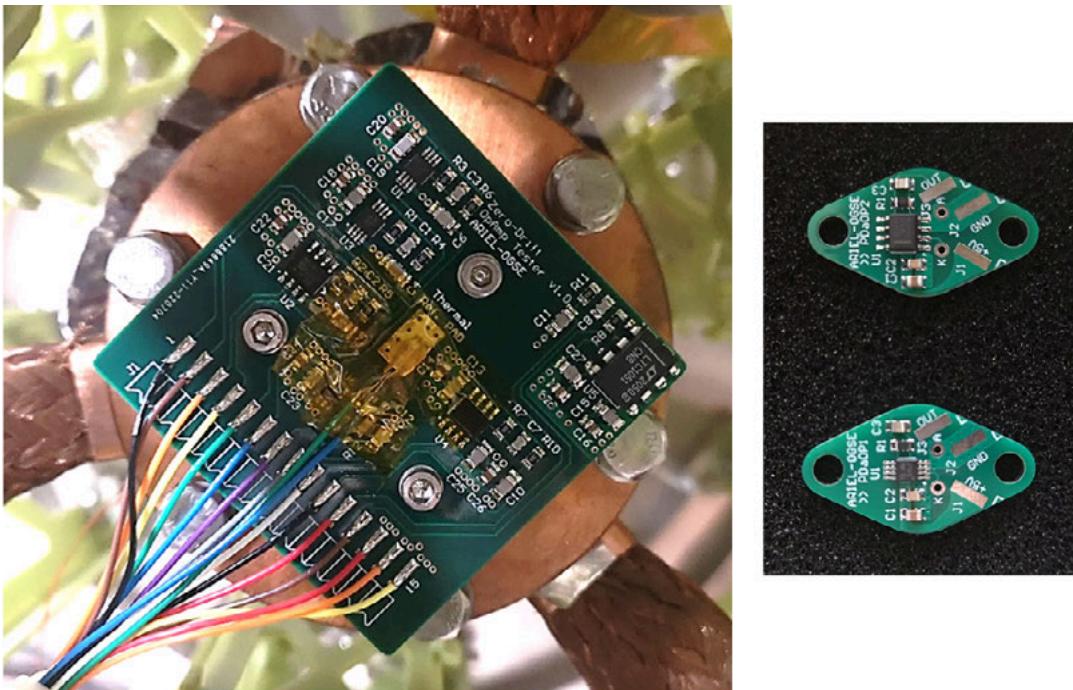

Figure: Electronic circuits for reference detector and pre-amplifier testing at cryo conditions (70K).

ATHENA (ESA)

The group of Instrumentation of IA is leading the international consortium for the development of the Athena mission on-board metrology system, in the sequence of the approval of activity proposal to the ESA tender, which had the kick-off in June 2020.

The function of the system being developed by the IA team is measuring the exact pointing of the Athena mirror during the process of switching focus between the X-IFU and WFI Athena instruments. The level of accuracy required for this task is at the level of a fraction of an arcsecond.

Most of the work done during 2023 was related to the development of the optical test setup in our labs. This testbed will be used to verify all the metrological and operational requirements defined for the EM version of the On-board Metrology system developed by our group.

Figure: OBM camera being prepared for verification testing

At the moment of writing, the OBM hardware and camera are being integrated for the testing phase. The consortium led by IA has already partially achieved the TRR milestone (test readiness review),

which assures the group readiness for the initiation of the verification and compliance testing. Full readiness is however being delayed by some problems associated to the image sensor operation, which are being actively pursued and debugged by the team with the support of the sensor manufacturer (Teledyne).

Highlights for 2023

- In November 2023, the integration of the MOONS Focal Plante Unit with its 1000 fibre positioner robots, developed by UKATC, into the Rotating Front End developed by IA, was successfully concluded, finishing one of the last and critical phases of the MOONS instrument.
- ANDES received in November 2023 the certificate of provisional acceptance (PVA) of the SAR, which officially closes the Phase B1 contract with ESO. ESO has granted the PVA without reservation and offered the consortium one night of Guaranteed Time Observation (GTO) on one of the instruments at the ELT telescope in return for the consortium's contribution to the System Architecture Review.
- Sixteen years after the first proposal in 2007, and with IA's participation since 2012, the Euclid mission was successfully launched this year, on July 1st. Euclid is a cosmology survey mission, designed to determine the properties of dark energy and dark matter on cosmological scales. It is unique in combining a wide field with high resolution and far reaching, and it will build a large archive, unprecedented for a space-based mission. Observations have started and the first images were released on November 7th. IA has a leading role in some aspects of the mission: developing the survey planning software, leading the survey operations support team, and coordinating the astrophysics (non-cosmology) program of the mission.
- In the scope of the PLATO project, as result of direct contract from ESA, a 3rd unit of the OGSE collimator was produced and commissioned @ ESA premises at ESTEC.
- The work on the Athena OBM led by IA achieved the TRR milestone, which determines the start of the testing and compliance verification of the prototype developed by the consortium.

Group Leader

Report from the Group

Science Communication

Throughout 2023 many initiatives of the Science Communication group were still marked by the past COVID-19 Pandemic. This continued to have an impact on the IA Science Communication Group (SCG) activity.

During 2023 the SCG organised and participated in several public Science Communication initiatives which reached a total of about 93 188 people (76 000 in 2022) people.

Public activities directly organised by IA reached about 66,183 people. These activities include, among others, planetarium shows, monthly periodic outreach sessions, exhibitions, showcases, hands-on laboratories and special public events and talks. The SCG team has also participated in several initiatives promoted by other institutions, such as Ciéncia Viva, the Museums of the University of Lisbon and many schools, contributing also with talks, observations of the night sky, planetarium shows, exhibitions, showcases, workshops and short courses, reaching about 27,005 people.

IA maintains its strong presence in social media, with 9800 followers on Facebook, 829 on Twitter, 1556 on Instagram and 2348 on Youtube. The group has produced 259 publications on Facebook, 215 on Twitter and 4 on Youtube. These numbers of (unpaid) publications resulted in a total reach of more than 286,754 people (unique users).

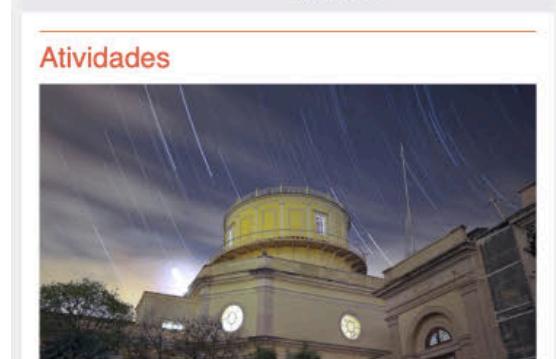

IA now has 4694 subscribers of the monthly IAstro Newsletter, a 6.8% increase over the number of subscribers in 2022. In total, IA sent 17 newsletters in 2023.

The SCG produced 6 articles (written for the public) for National Geographic Portugal and SAPO Tek websites. This increases the visibility of IA since, for example, SAPO Tek reaches about 2 million people. In 2023 the SCG also created several media contents, such as Youtube videos, and contents for its official webpage.

The SCG team produced and made available to the media 14 press releases (3 international) related to the science produced by IA or to its outreach activities. We also made available through our webpage and partners, 2 news releases.

Atividades

Star Party - Luar de Outono

Sábado, 28 Outubro, 18h00 - 00h00

Observatório Astronómico da Ajuda

Em noite de eclipse lunar parcial, o Instituto de Astrofísica e Ciências do Espaço (IA) lança o convite para uma Star Party no Observatório Astronómico da Ajuda. Esta edição inclui visitas guiadas ao Observatório, observação do céu noturno com telescópios, speed-dating com astrônomos, a história de um rato que foi à Lua e outras atividades.

Várias atividades sujeitas a inscrição no local. As observações astronómicas estão dependentes de condições meteorológicas favoráveis.

Ignite IAstro – Marco de Canaveses

Sábado, 11 Novembro, 21h00

Emergente - Centro Cultural, Marco de Canaveses

Vamos viajar do Sistema Solar às estrelas e às galáxias, e falar dos instrumentos que nos permitem chegar tão longe. O formato dos eventos Ignite IAstro permite expor, de modo divertido e acessível, cerca de uma dezena de temas da investigação em ciências do espaço feita em Portugal.

Em cada evento da Dígrressão Ignite IAstro, entre oito e dez investigadores do Instituto de Astrofísica e Ciências do Espaço apresentam a sua

IA has been mentioned by international news media, for example: Quanta Magazine, Universe Today, Phys.org, and Space.com.

The science communication and education work at IA has been presented in national and international conferences with invited and contributed talks – 5 invited talks and 7 contributed talks. The conferences include, among others, the National Conference Scientix, the 5th Shaw-IAU Workshop on Astronomy for Education and the XXXIII Encontro Nacional de Astronomia e Astrofísica – ENAA. The team is responsible for several articles for monthly columns.

The SCG has supervised about 100 bachelor and master students from several faculties and universities, including Faculdade de Ciências Sociais e Humanas da Universidade Nova de Lisboa, Faculdade de Belas Artes da Universidade do Porto, Universidade Lusófona, Faculdade de Ciências da Universidade do Porto and Politécnico do Porto – Escola Superior de Educação.

The IAstro Summer Internships are a three-week IA program to give university students a first contact with the research done at IA, as well as training in science communication. The 2023 edition offered a total of 17 projects and two science communication workshops, involving 26 researchers. 161 applications were received and 69 students participated in the training, from around 62 different universities from Portugal, Brazil, United Kingdom, Spain, Italy, Germany, The Netherlands, India, Pakistan, Bolivia, Chile, among other countries.

During 2023, the SCG has conducted several training sessions for teachers, science communication officers, students and the non-specialist public.

The SCG is responsible for the creation and development of several national projects like, the Rewrite the Stars, Ignite IAstro Tour and CoAstro:@n Astronomy Condo. IA also participated in the Cientificamente Provável programme, a partnership by the Portuguese Government, implemented through the network of school libraries, and in the Clubes Ciência Viva na Escola, a Ciência Viva project, partnering with 112 schools.

IA provides the scientific management of the Planetário do Porto CCV activities, all of which are developed, organised and implemented by members of IA's SCG, having reached in 2023 64,715 people through fixed domed and portable planetarium sessions, hands-on laboratories, online activities and special initiatives.

Following the memorandum between IA and the Office for Astronomy Outreach of the International Astronomical Union (IAU-OAO), the largest international organisation in astronomy, IA continued to expand the production of contents and tools for the communication and teaching of astronomy. One of the components of this collaboration is the involvement of IA at the editorial level in IAU's international peer-reviewed journal of astronomy communication, *Communicating Astronomy with the Public* (CAjurnal), in which IA will figure as official partner.

IA co-leads, together with the Leiden Observatory/University of Leiden, the development of an international Astronomy Literacy Project, which aims to define global astronomy education goals to be applied in worldwide school curricula. The SCG has been working towards following what it has committed to – prepare the third version of the “Big Ideas in Astronomy” booklet, the first deliverable from this project which is hosted by the International Astronomical Union’s Office of Astronomy Education (OAE). This is being done by conducting a Delphi Study which will guarantee that the document is an “Expert Document”, after several iterations with more specialists in the areas covered by the booklet.

IA continues with a strong involvement with the “Portuguese Language Expertise Centre for the Office of Astronomy for Development (of the International Astronomical Union)” – PLOAD. It is hosted by Núcleo Interativo de Astronomia (NUCLIO), in collaboration with IA. The PLOAD’s main objectives are to establish a strong collaborative network between Portuguese speaking countries and communities and empower these countries and communities with the necessary tools to build their own local support structures and strategy development in Astronomy and Space Sciences.

For the future, the SCG will continue to enhance the public understanding of the Universe, improve scientific literacy, and foster links between society and research. This is achieved through a diversity of actions aligned along four strategic pillars:

- Museums & Science Centres
- Society Engagement
- Inclusion & Equity
- Internationalisation

In the period 2024-2029 the group will reinforce its presence in all these domains, pursuing the following objectives:

- i) Schools and the wider public: through the Porto Planetarium-CCV – the only Ciência Viva centre managed by a research institute – and activities at the Astronomical Observatory of Lisbon and GAOUC’s planetarium and museum collection, we aim at surpassing 500k in-person visitors. We will focus on producing, and distributing nationwide, our own content adapted to school programs. Additionally, we will also reinforce the activities of the PRR-funded Ciência Viva School, using research-based teaching methods, in articulation with the municipal council.

- ii) Extending key partnerships: with Turismo de Portugal, we will train night sky guides for a programme on dark sky awareness and sustainable regional tourism. We will also strengthen synergies with the Portuguese Republic's Presidency and the Parliament to reach policy makers through regular and diverse initiatives at these institutions' official premises.
- iii) Contributing to global society: with Leiden University and IAU-OAE, we will publish the 3rd version of the first global Astronomy Literacy document, Big Ideas in Astronomy. Moreover, we will reinforce, at the editorial level, the only Communication in Astronomy peer-reviewed journal - IAU's CAPJournal.
- iv) Social responsibility: the project Rewrite the Stars (see group's highlights), will be extended nationally and, potentially, internationally. The next steps include seeking financial support and strengthening the partnerships with important institutions like the Portuguese Institute for Cancer and Casa Pia Lisboa.

31. Ângela Santos; *O género da nossa estrela: a atividade das estrelas*; Online - Noite de observação: Apresentação às estrelas do Centro Ciência Viva do Algarve; 09 February 2023
32. Bárbara Soares; *How to swallow a planet: Processes and consequences of planet engulfment*; PlanetS@Fantasy Basel 2023, Basel, Switzerland; 18 May 2023
33. Bárbara Soares; *Dia das Mulheres e Raparigas na Astronomia 2023*; 11 February 2023
34. Bruno Arsioli; *On the solar very-high energy emission*; Ignite IAstro, Ílhavo; 14 October 2023
35. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES Fonseca Benevides, Lisboa; 9 October
36. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES José Macedo Fragateiro, Ovar; 17 October 2023
37. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES Josefa de Óbidos, Lisboa; 19 October 2023
38. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES Maria Amália Vaz de Carvalho, Lisboa; 25 October 2023
39. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES Emídio Navarro, Almada; 26 October 2023
40. Carlos Martins; *A Física da Energia e do Aquecimento Global*; ES de Vouzela; 8 November 2023

Outreach talks [261]

1. Afonso Vale; *Blinking Lights in Taurus: long-term variability of Young Stars and Brown Dwarfs*; Planetário do Porto; 4 December 2023
2. Alberto Negrão; *Titã, uma lua de outro mundo*; Ignite IAstro, Ílhavo; 14 October 2023
3. Alexandre Cabral; *Há futuro na exploração Espacial?*; Mesa redonda 3 Day Mission SP4C3 EXPLORATION, FCUL – Lisboa; 15 October 2023
4. Alexandre Cabral; *A Magia da Luz e da Cor*; Palestra na Escola B+S Gama Barros, Cacém, Sintra; 10 February 2023
5. Alexandre Cabral; *A Magia da Luz e da Cor*; Escola B D. António de Ataíde, Castanheira do Ribatejo, Vila Franca de Xira; 25 March 2023
6. Alexandre Cabral; *Grandes telescópios, espectrógrafos e a luz em busca de planetas extra solares*; Escola Secundaria Leal da Camara - Rio de Mouro; 20 April 2023
7. Alexandre Cabral; *Astronomia XXL*; Ignite Astro, Auditório dos Paços do Concelho, Torres Vedras; 15 April 2023
8. Alexandre Cabral; *A Luz*; Centro Ciência Viva do Lousal; 16 February 2023
9. Alexandre Cabral; *Uma Aventura no Deserto de Atacama*; Centro Ciência Viva do Lousal; 24 November 2023
10. Ana Rita Costa Silva; *Astronomia 101*; Escola de Verão de Astronomia, Instituto Superior Técnico, Lisboa; 6 September 2023
11. Ana Rita Costa Silva; *Astronomia no Feminino*; Planetário do Porto, Porto; 11 February 2023
12. Ana Rita Costa Silva; *Exoplanetas e a procura por vida extraterrestre*; Astrofesta XXVIII, Centro de Ciência Viva de Constância; 26 August 2023
13. Ana Rita Costa Silva; *Exoplanetas*; Universidade Júnior do Porto, Centro de Astrofísica da Universidade do Porto; 11 & 18 July 2023
14. Ana Rita Costa Silva; *Instagram como ferramenta para comunicação de ciência e influência para a ciência*; Encontro Nacional de Astronomia e Astrofísica XXXIII, Coimbra; 9 September 2023
15. Ana Rita Costa Silva; *Outros mundos, outras atmosferas*; Ignite IAstro, Torres Vedras; 15 April 2023
16. Ana Rita Costa Silva; *Quando for grande, quero andar com a cabeça na Lua*; Escolas Secundárias e Observatório Astronómico de Santana, São Miguel, Açores; 11-12 May 2023
17. Ana Rita Costa Silva; *Ver estrelas através do Instagram*; INOVA+ Webinar series Ciência às Quartas; 13 September 2023
18. Ana Paulino Afonso; *Portugal at the International Astronomy Olympiad*; Coimbra; 9 September 2023

41. Carlos Martins; *A Física da Gravidade e dos Satélites*; Colégio da Trofa, Portugal; 12 October 2023
42. Carlos Martins; *A Física da Gravidade e dos Satélites*; ES da Ribeira Grande, Azores; 11 October 2023
43. Carlos Martins; *A Física da Gravidade e dos Satélites*; ES de Pinhal de Rei, Marinha Grande; 13 October 2023
44. Carlos Martins; *A Física da Gravidade e dos Satélites*; ES da Maia; 20 October 2023
45. Carlos Martins; *A Física da Gravidade e dos Satélites*; ES da Bemposta, Portimão; 24 October 2023
46. Carlos Martins; *A Física da Gravidade e dos Satélites*; ES de Fajões, Oliveira de Azeméis; 10 November 2023
47. Carlos Martins; *A Física da Gravidade e dos Satélites*; Nobel International School Algarve, Lagoa; 24 October 2023
48. Carlos Martins; *A Física da Radioactividade e do Cancro*; ES de Castro Verde; 27 March 2023
49. Carlos Martins; *A Física da Radioactividade e do Cancro*; ES de S. Roque do Pico; 9 October 2023
50. Carlos Martins; *A Física da Radioactividade e do Cancro*; ES de Estarreja; 17 October 2023
51. Carlos Martins; *A Física da Radioactividade e do Cancro*; ES Filipa de Vilhena, Porto; 27 November 2023
52. Carlos Martins; *A Física da Relatividade*; ES Filipa de Vilhena, Porto; 20 October 2023
53. Carlos Martins; *A Física da Relatividade*; ES Latino Coelho, Lamego; 30 October 2023
54. Carlos Martins; *A Física da Relatividade*; ES Rocha Peixoto, Póvoa de Varzim; 9 November 2023
55. Carlos Martins; *A Física da Vida e dos Extraterrestres*; ES Aurélia de Sousa, Porto; 13 November 2023
56. Carlos Martins; *A Física do Big Bang*; ES Camilo Castelo Branco, Famalicão; 12 October 2023
57. Carlos Martins; *A Física do Big Bang*; ES Sebastião da Gama, Setúbal; 26 October 2023
58. Carlos Martins; *A Física do Big Bang*; IberiCos 2023 Public Talk, Ponte de Lima; 3 April 2023
59. Carlos Martins; *Euclid e o lado escuro do Universo*; CAUP Public Talk; 1 July 2023
60. Carlos Martins; *How to improve Portuguese secondary education*; CEIA-PPCB, Paredes de Coura; 18 August 2023
61. Carlos Martins; *The Phi in the Sky project*; CEIA-PPCB, Paredes de Coura; 21 August 2023
62. Catarina Lobo; *A nossa galáxia e as outras: uma viagem através do Universo*; Escola Secundária Gonçalves Zarco (Matosinhos); 24 November 2023
63. Catarina Lobo; *A nossa galáxia e as outras: uma viagem através do Universo*; Colégio Casa Mãe (Baltar); 12 December 2023
64. Catarina Lobo; *A Via Láctea e as outras galáxias*; Centro de Astrofísica da Universidade do Porto (Universidade Júnior UP); 11 July 2023
65. Catarina Lobo; *A Via Láctea e as outras galáxias*; Centro de Astrofísica da Universidade do Porto (Universidade Júnior UP); 18 July 2023
66. Catarina Lobo; *Dentro de um enxame... de galáxias!*; Ignite IAstro 2023, Vizela (Auditório Francisco Ferreira); 20 May 2023
67. Catarina Lobo; *Dentro de um enxame... de galáxias!*; Ignite IAstro, Marco de Canaveses; 11 November 2023
68. Catarina Marques; *Cosmologia Observacional: o caminho do ESPRESSO ao ANDES*; DFA – FCUP; 18 April 2023
69. Catarina Marques; *Os mistérios do nosso Universo: em busca das respostas*; Escola Secundária de São Pedro do Sul (online), Viseu; 23 October 2023
70. Catarina Marques; *Os mistérios do nosso Universo: em busca das respostas*; Escola Básica de Montenegro (online), Faro; 26 October 2023
71. Catarina Marques; *Os mistérios do nosso Universo: em busca das respostas*; Escola Secundária Inês de Castro, Vila Nova de Gaia; 10 November 2023
72. Catarina Marques; *Os mistérios do nosso Universo: em busca das respostas*; Escola Básica do Sudeste de Baião (online), Porto; 13 November 2023
73. Catarina Marques; *Os mistérios do nosso Universo: em busca das respostas*; Escola Secundária de São Pedro da Cova, Gondomar; 14 November 2023
74. Cédric Pereira; *Workshop sobre a Missão Espacial ARIEL, o projecto ExoClock e utilização de telescópios*; Semana Mundial do Espaço 2023, Açores; 9 October 2023
75. Cirino Pappalardo; *Portugal on the MOONS*; Ignite IAstro, Torres Vedras; 15 April 2023
76. Clara Sousa Silva; *Life and how to find it*; Hudson Canal Historical Society; 29 September 2023
77. Clara Sousa Silva; *Life and how to find it*; Lifelong Learning Institute; 6 October 2023
78. Clara Sousa Silva; *Space Talk*; Liberty Science Center; 16 November 2023
79. Daniel Folha; *The Wow Factor - Science communication for the general public*; Instituto Universitário de Ciências da Saúde - CESPU PhD Day; October 2023
80. Davi Barbosa; *Radiografia das Galáxias*; XXVIII Astrofesta, Constância; 26 August 2023
81. Davi Barbosa; *Do Micro ao Macro*; Espaço vai à escola – ESERO & Ciência Viva, Escola Primária João Franco, Fundão (online)
82. David Grüber; *A brief history of our universe*; "Astronomy on Tap", Catraio/Porto; 3 May 2023
83. Elisa Delgado Mena; *Del Big Bang a los exoplanetas: un viaje químico a través del espacio*; University of Valladolid, Spain; 5 October 2023
84. Francisco S. N. Lobo; *Odisseia no Espaço: 2023 e além...*; "3 Day Mission: SP4C3 EXPLORATION" - Congresso '23 da Physis; 14 October 2023
85. Ilídio André Costa; *Um dia muito especial*; Escola Básica Manoel de Oliveira, Porto; 09 October 2023
86. Ilídio André Costa; *Um dia muito especial*; Escola Básica dos Miosótis, Porto; 10 October 2023
87. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Santa Cruz da Trapa, São Pedro do Sul; 10 October 2023
88. Ilídio André Costa; *Um dia muito especial*; Escola Básica Júlio Dinis, Grijó, Vila Nova de Gaia; 10 October 2023
89. Ilídio André Costa; *Com a verdade me enganas*; Escola Secundária Jaime Moniz; 12 October 2023
90. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Ponte das Trés Entradas, Oliveira do Hospital; 12 October 2023
91. Ilídio André Costa; *Um dia muito especial*; Jardim de Infância de Areias, Gondomar; 12 October 2023
92. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Casal do Malta, Marinha Grande; 16 October 2023

93. Ilídio André Costa; *Um dia muito especial*; Escola Básica n.º 1 de São Caetano, Gondomar; 16 October 2023
94. Ilídio André Costa; *Com a verdade me enganas*; Escola Básica do Castro, Alvarelhos, Trofa; 16 October 2023
95. Ilídio André Costa; *Com a verdade me enganas*; Escola Básica Soares dos Reis, Vila Nova de Gaia; 16 October 2023
96. Ilídio André Costa; *Um dia muito especial*; Ilha de Santa Maria- Açores; 17 October 2023
97. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Amareleja, Moura; 17 October 2023
98. Ilídio André Costa; *Um dia muito especial*; Jardim Escola João de Deus Tomar 1; 17 October 2023
99. Ilídio André Costa; *Um dia muito especial*; Escola Básica Manuel Augusto Papança, Reguengos de Monsaraz; 23 October 2023
100. Ilídio André Costa; *Um dia muito especial*; Escola Básica e Secundária de Mora; 24 October 2023
101. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Guetim, Espinho; 24 October 2023
102. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Azagães, Carregosa, Oliveira de Azeméis; 24 October 2023
103. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Azagães, Carregosa, Oliveira de Azeméis; 25 October 2023
104. Ilídio André Costa; *Um dia muito especial*; Escola Básica da Agrela e Vale do Leça, Santo Tirso; 25 October 2023
105. Ilídio André Costa; *Com a verdade me enganas*; Escola Básica D. Afonso Henriques, Creixomil, Guimarães; 25 October 2023
106. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Santa Marta do Pinhal, Corroios, Seixal; 26 October 2023
107. Ilídio André Costa; *Um dia muito especial*; Escola Básica Arquitecto Victor Palla, Lisboa; 27 October 2023
108. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Azagães, Carregosa, Oliveira de Azeméis; 30 October 2023
109. Ilídio André Costa; *Um dia muito especial*; Escola Básica de São João de Deus, Lisboa; 30 October 2023
110. Ilídio André Costa; *Um dia muito especial*; Escola Básica de São Paio, Canidelo, Vila Nova de Gaia; 30 October 2023
111. Ilídio André Costa; *Com a verdade me enganas*; Escola Secundária Filipa de Vilhena, Porto; 30 October 2023
112. Ilídio André Costa; *Com a verdade me enganas*; Escola Secundária Filipa de Vilhena, Porto; 30 October 2023
113. Ilídio André Costa; *Um dia muito especial*; Escola Básica de Pedreira, Argivai, Póvoa de Varzim; 31 October 2023

11. A. J. G. Falorca; 2023; *Numerical simulations (HD and MHD) of planetary winds in the vicinity of stellar winds emanating from their host stars*; Physics Master; Supervisor(s): **J. J. G. Lima**
12. M. C. Ralha; 2023; *Effective dose equivalent estimation for humans on Mars*; Master in Medical Physics; Supervisor(s): P. Teles, **N. C. Santos**
13. J. Lino; 2023; *Looking at the Sun, finding other Earths: identification of solar regions*; Master in Engineering Physics; Supervisor(s): **N. C. Santos, A. M. Silva**
14. J. M. L. Amoreira; 2023; *Stellar flare spectroscopy with ESPRESSO: detecting planets around flaring stars*; Mestrado Bolonha em Engenharia Física Tecnológica; Supervisor(s): I. Lopes, **V. Zh. Adibekyan**
15. J. Pereira; 2023; *Variations of the ionospheric total electron content over continental Portugal and islands*; Physics Master; Supervisor(s): **A. Morozova**
16. D. M. Santos; 2023; *Who is Who? Fado and galaxy classification*; Supervisor(s): **C. Pappalardo**
17. M. A. S. Pinto; 2023; *Gravitational induced particle production in modified gravity*; Supervisor(s): **F. S. N. Lobo**
18. Devang Somawanshi; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral Field Spectroscopy*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
19. Fernando Francisco da Silva Pereira e Caldas Ferreira; *Undergraduate Astrophysics Projects (FCUP): Galaxies or Clumps? Understanding the True Nature of LAEs during Cosmic Dawn*; Supervisor: Ana Paulino Afonso; September 2023 - December 2023
20. Gourav Kumawat; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral Field Spectroscopy*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
21. Inês Nogueira Lello de Caldevilla; *Undergraduate Astrophysics Projects (FCUP): Unveiling Hidden Galaxy Populations through Unsupervised Machine Learning*; Supervisor: Ana Paulino Afonso; September 2023 - January 2024
22. Irati Lizaso Berrueta; *IA Summer Internship: Exploring the COSMOS with Machine Learning: galaxies' physical properties*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
23. Ishan Jindal; *IA Summer Internship: Deep Learning for envisioning the evolution of bulge-to-total luminosity ratio*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
24. Joana Correia; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
25. Júlia Mestre; *IA Summer Internship: Counting and characterising galaxies in JWST deep field observations*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
26. Laxmi N. Ambuj; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
27. Margarida Fonseca; *IA Summer Internship: Exploring the COSMOS with Machine Learning: galaxies' physical properties*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
28. Meghna Varma; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
29. Pedro Ferreira; *IA Summer Internship : Exploring the COSMOS with Machine Learning: galaxies' physical properties*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
30. Rodrigo Cosme; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral Field Spectroscopy*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
31. Rupam Kundu; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral Field Spectroscopy*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
32. Sarah Aranibar; *IA Summer Internship: Exploring the COSMOS with Machine Learning: galaxies' physical properties*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
33. Shreyas Bhonjal; *IA Summer Internship: Counting and characterising galaxies in JWST deep field observations*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
34. Sudipta Mridha; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral*

BSc Traineeships / Projects completed [215]

(under the supervision of IA researchers)

1. Aman Kumar; *IA Summer Internship: Deep Learning for envisioning the evolution of bulge-to-total luminosity ratio*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
2. Anisha Khatri; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
3. Atul Samanta; *IA Summer Internship: Deep Learning for envisioning the evolution of bulge-to-total luminosity ratio*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
4. Beatriz Moura; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
5. Chaitanya Gaikwad; *IA Summer Internship: Counting and characterising galaxies in JWST deep field observations*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
6. Debarshi Mukherejee; *IA Summer Internship: Counting and characterising galaxies in JWST deep field*

- Field Spectroscopy; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
24. Suvam Tripathy; *IA Summer Internship: Local Galaxies as time machines: navigating biases in studying cosmic evolution*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
 25. Vishalika Sharma; *IA Summer Internship: AMUSING ourselves with the secrets of galaxies using Integral Field Spectroscopy*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
 26. Yichen Cao; *IA Summer Internship: Counting and characterising galaxies in JWST deep field observations*; Supervisor: Ana Paulino Afonso; July 2023 - July 2023
 27. Pedro Afonso; *Co-supervisor of undergraduate project: A new activity proxy for finding other Earths*; Supervisor: André Silva; November 2022 - February 2023
 28. Eduardo Campos Gonçalves; *Summer Internship: Degeneracy between starspot latitudes and stellar inclination angle in the integrated light of solar-like stars*; Supervisor: Ângela Santos; July 2023 – Sep 2023
 29. Fernando Francisco S. P. C. Ferreira; *PEEC: Spatial distribution of active regions over the solar magnetic cycle: I. Sunspot distribution*; Supervisor: Ângela Santos; February 2023 –July 2023
 30. Francisco P. S. Antunes Ferreira; *Continuation of the PEEC: Spatial distribution of active regions over the solar magnetic cycle: II. Photometric time-series*; Supervisor: Ângela Santos; October 2023 – December 2023
 31. Francisco P. S. Antunes Ferreira; *PEEC: Spatial distribution of active regions over the solar magnetic cycle: II. Photometric time-series*; Supervisor: Ângela R. G. Santos; February 2023 - July 2023
 32. Léana Jubert; *Internship: Metallicity of Kepler stars*; Supervisor: Ângela Santos; January 2023 - July 2023
 33. Victor Maraud; *Internship: Asteroseismology of chemically peculiar pulsators*; Supervisor: Ângela Santos; March 2023 - July 2023
 34. Akel Bernal Kede; *Escola de Verão 2023 (UC): Ionospheric response to atmospheric forcings*; Supervisor: A. Morozova; June 2023 - October 2023
 35. Miguel Nunes; *Estágio em Engenharia Física: Atmospheric seeing measurements on campus*; Supervisor: Bachar Wehbe; May 2023 - July 2023
 36. Rafael Salgado; *IA Summer Internship: Atmospheric seeing measurements in CAUP*; Supervisor: Bachar Wehbe; July 2023 - July 2023
 37. Alena Vanzurova (Masaryk U., Czechia); *Erasmus Traineeship: Constraining alternative cosmological models*; Supervisor: Carlos Martins
 38. Ana Alexandra Dias (Colégio INED, Porto); *OCJF internship: Watching the universe expand in real time*; Supervisor: Carlos Martins
 39. Bruno Parracho (FCUP); *PEEC: Tests of dynamical dark energy models*; Supervisor: Carlos Martins
 40. Cátia Silva (ES Inês de Castro, VN Gaia); *AstroCamp internship: Probing the nature of dark energy*; Supervisor: Carlos Martins
 41. Celia Clerfeuille (U. Strasbourg, France); *M2 internship: Varying Mu Cosmography*; Supervisor: Carlos Martins
 42. Chloé Barjou-Delayre (U. Toulouse III, France); *M2 internship: Varying Alpha in the Galaxy*; Supervisor: Carlos Martins
 43. Iuna Dreyer (IST, Portugal); *IST PIC: Loop solutions for wiggly and superconducting strings*; Supervisor: Carlos Martins
 44. Joana Costa (FCUP); *PEEC: Astrophysics, programming and statistics for secondary schools*; Supervisor: Carlos Martins
 45. José Ascensão (FCUP); *PEEC: Testing dark energy and modified gravity models*; Supervisor: Carlos Martins
 46. Josep Vaquer; *Joves i Ciència Program: Scaling solutions of defect networks*; Supervisor: Carlos Martins
 47. Magda Roçadas (ES Aurélia de Sousa, Porto); *OCJF internship: The physics of other universes*; Supervisor: Carlos Martins
 48. Mariana Melo e Sousa (FCUP); *PEEC: Constraining curvature with the redshift drift*; Supervisor: Carlos Martins
 49. Pedro Figueiredo (FCUP); *PEEC: Varying alpha cosmography*; Supervisor: Carlos J. A. P. Martins
 50. Samy Vinzl (U. Toulouse III, France); *Erasmus Traineeship: Measuring the CMB temperature with ESPRESSO*; Supervisor: Carlos Martins
 51. Sára Berger (E.S. Teleki Blanka, Szekesfehervar, Hungria); *AstroCamp internship: Probing the nature of dark energy*; Supervisor: Carlos Martins
 52. Sofia Fernandes (ES Ermesinde); *OCJF internship: Watching the universe expand in real time*; Supervisor: Carlos Martins
 53. Teresa Miranda (FCUP); *PEEC: Scientific literacy and numeracy in Portugal*; Supervisor: Carlos Martins
 54. Tomás Pinto (FCUP); *PEEC: Watching the universe expand in real time*; Supervisor: Carlos Martins
 55. Unai Canudas; *Joves i Ciència Program: Scaling solutions of defect networks*; Supervisor: Carlos Martins
 56. Mariana Lino; *IA Summer Internships: Discover the Universe*; Supervisor(es): Catarina Leote, Ricardo Reis; July 2023 - July 2023
 57. Rafia Waqar; *IA Summer Internships: Discover the Universe*; Supervisor(es): Catarina Leote, Ricardo Reis; July 2023 - July 2023
 58. Sónia Lucas; *MSc thesis in Science Communication from NOVA FCSH: Comunicação de Astronomia e Astrofísica em Portugal - a Abordagem do Instituto de Astrofísica e Ciências do Espaço*; Supervisor: Catarina Leote; September 2023 - November 2023
 59. Tiago Martins Sinde Lourenço; *1 semester project in the framework of the curricular unit Project in Astrophysics (FCUP BSc in Physics) "Exploring the physics of jellyfish galaxies"*; Supervisor: Catarina Lobo; February 2023 - May 2023.
 60. Victor Santos; *Project for Laboratório de Astrofísica: Passive but not Resigned*; Supervisor: Cirino Pappalardo; October 2022 - February 2023
 61. Daniel Matos; *Project for Laboratório de Astrofísica: Light my MOSFIRE*; Supervisor: Cirino Pappalardo; October 2022 - February 2023
 62. Caetano Ramos; *Black hole shadows and photon rings*; Supervisor: Francisco S. N. Lobo; April 2023 – July 2023
 63. Margarida Graça; *Traversable wormholes in modified gravity and their use for interstellar travel*; Supervisor: Francisco S. N. Lobo; April 2023 – July 2023
 64. Catarina Cristina; *Laboratory Astrophysics Projects – FCUL: Traversable wormholes in modified gravity and their use for interstellar travel1*; Supervisor: Francisco S. N. Lobo; 2022 - 2023
 65. André Roldan; *Laboratory Astrophysics Projects – FCUL: Black hole shadows and photon rings*; Supervisor: Francisco S. N. Lobo; 2022 - 2023

66. Ana Varo; *IA Summer Internship: Light my MOSFIRE*; Supervisor: Henrique B. Miranda, July 2023 - July 2023
67. Leonor Ferro; *IA Summer Internship: Light my MOSFIRE*; Supervisor: Henrique B. Miranda, July 2023 - July 2023
68. Maryam Ahsan; *IA Summer Internship: Light my MOSFIRE*; Supervisor: Henrique B. Miranda; July 2023 - July 2023
69. Suman Sahu; *IA Summer Internship: Light my MOSFIRE*; Supervisor: Henrique B. Miranda; July 2023 - July 2023
70. Adriana Maria Casanova Casais; *Licenciatura em Educação Básica, ESSE-Porto, IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
71. Alunos das turmas do 7º ano do Conservatório de Música do Porto; *Astronomia de Bolso, Projeto SEI (Sociedade, Escola, Investigação)*; Supervisor: Ilídio Costa; October 2023 -ongoing.
72. Ana Rita Marques da Silva; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
73. Ângela Machado; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas*; Supervisor: Ilídio Costa; April 2023 - June 2023
74. Beatriz Graça Martins; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
75. Beatriz Pereira Caldas; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
76. Eduardo Arantes Magalhães; *PEEC: Contributos para a investigação em ensino e divulgação das ciências II - Conhecimentos em Astronomia*; Supervisor: Ilídio Costa; January 2023 - July 2023
77. Filipa Alexandra Ribeiro Azevedo; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
78. Francisca Lage Rego; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
79. Francisca Martins Esteves; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
80. Fredson Jorge dos Santos Delgado; *PEEC: Contributos para a investigação em ensino e divulgação das ciências I - Avaliação da formação contínua de professores do PP-CCV*; Supervisor: Ilídio Costa; January 2023 - July 2023
81. Margarida Silva e Sousa; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
82. Maria Vaz de Salvador; *PEEC: Contributos para a investigação em ensino e divulgação das ciências II - Atitudes e Crenças em relação à Astronomia*; Supervisor: Ilídio Costa; January 2023 - July 2023
83. Marta Branco da Silva; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas profissionais*; Supervisor: Ilídio Costa; April 2023 - June 2023
84. Patrícia do Carmo Crispim Ribeiro; *Licenciatura em Educação Básica - ESE-Porto – IPP: Contextos e perfis da educação não formal, Iniciação às práticas*; Supervisor: Ilídio Costa; April 2023 – June 2023
85. Pedro dos Santos Ferreira Guimarães; *PEEC: Contributos para a investigação em ensino e divulgação das ciências II - Perceções dos astrónomos sobre a comunicação de ciência*; Supervisor: Ilídio Costa; January 2023 – July 2023
86. Prathmesh Jadhav; *IA Summer School: Contributos para a investigação em ensino e divulgação das ciências - Questionário de avaliação de literacia em astronomia*; Supervisor: Ilídio Costa; July 2023
87. Ranjini Murthy; *IA Summer School: Contributos para a investigação em ensino e divulgação das ciências - Questionário de avaliação de literacia em astronomia*; Supervisor: Ilídio Costa; July 2023
88. Joana Bagagem; *Short project: Connecting galaxies photometry with Supermassive Black Holes (SMBH) properties: A machine learning approach*; Supervisor: Israel Matute; October 2022 - February 2023
89. Leonor Ferro; *Short project: Secrets of the most massive supermassive black holes in the universe*; Supervisor: Israel Matute; October 2022 - February 2023
90. Maria Cravinho; *Short project: AGN demographics through Athena simulations*; Supervisor: Israel Matute; October 2022 - February 2023
91. Gorka Zubiri; *Laboratório de Astrofísica: Young stellar sources in the near-infrared: Processing and Analysis*; Supervisor: João L. Yun; October 2022 – February 2023
92. Maria Vitória Noronha Osório aguiar Branco; *PEEC: Determinação automática do excesso de emissão em estrelas jovens*; Supervisor: Jorge Gameiro; February 2023 - July 2023
93. Leonor Ferro; *Internship: Secrets of the most massive supermassive black holes in the universe*; Supervisor: José Afonso; October 2022 – January 2023
94. Luís Barroso; *Internship: Exploring the most active supermassive black holes in the first Gyr of the Universe*; Supervisor: José Afonso; October 2022 – January 2023
95. Peer Kuhlbrodt; *BSc thesis: Estimating the fraction of Active Galactic Nuclei hosting a black-hole binary with cosmological simulations*; Supervisor: José Afonso; April 2023 – December 2023
96. Pietro Malagoli; *Internship: Seeking serendipitous galaxies amongst JWST observations*; Supervisor: José Afonso; October 2022 – January 2023
97. José Henrique Rodrigues; *UC Project in Astrophysics: Line misidentification in future spectroscopic surveys*; Supervisor: José Fonseca; October 2022 – January 2023
98. Luciano dos Santos; *UC Project in Astrophysics: Using Gaia Quasars for Cosmology*; Supervisor: José Fonseca; October 2023 – January 2024
99. Luciano dos Santos; *PEEC: Testing the Dual Distance Relationship*; Supervisor: José Fonseca; February 2023 - June 2023
100. Daniel Bento; *Project - Laboratório de Astrofísica: Time Domain Astronomy: Redshift drift as a probe of*

- cosmology; Supervisor: José Pedro Mimoso; October 2022 - February 2023
101. Pedro Fanha; *Project in Astronomy, Curricular Unit of BSc in Physics UP: Testing a tool to probe the core of red-giant stars*; Supervisor: Margarida Cunha; September 2022 – January 2023
102. Diogo Marques; *estágio sobre o tema "Development of a tool for the normalization of stellar spectra - application to ESPRESSO data"*; Supervisores - Nuno Santos, André Silva; March 2023 - June 2023
103. Rodrigo Aarão; *IA Summer Internships: Characterisation of a transiting exoplanet using CHEOPS photometry*; Supervisor: Nuno Rosário; July 2023 - July 2023
104. José Sousa; *IA Summer Internships: Characterisation of a transiting exoplanet using CHEOPS photometry*; Supervisor: Nuno Rosário; July 2023 - July 2023
105. Madalena Silva Resende Ferreira Costa; *Planetário do Porto – Centro de Ciência +Acessível – projeto SPACE OUT*; Supervisors: Paulo J. T. Pereira, Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA) entre outros; February 2023 - June 2023
106. Pedro Miguel Carvalho Soares; *Planetário do Porto – Centro de Ciência +Acessível – projeto SPACE OUT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
107. Nuno Filipe Belo Soares Braga Chaves; *Planetário do Porto – Centro de Ciência +Acessível – projeto SPACE OUT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
108. Aisha Silva Monteiro; *Planetário do Porto – Centro de Ciência +Acessível – projeto SPACE OUT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
109. Ana Lúcia Lopes Cunha; *Planetário do Porto – Centro de Ciência +Acessível – projeto LOST IN SPACE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
110. Maria Inês Monteiro Figueiredo; *Planetário do Porto – Centro de Ciência +Acessível – projeto LOST IN SPACE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
111. Helena Isabel Tavares Carvalho; *Planetário do Porto – Centro de Ciência +Acessível – projeto LOST IN SPACE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
112. Inês Ferreira Martins; *Planetário do Porto – Centro de Ciência +Acessível – projecto LOST IN SPACE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
113. Renato Dias dos Santos Silva; *Planetário do Porto – Centro de Ciência +Acessível – projeto PLANETARY EXPEDITION*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
114. Maria Isabel de Oliveira Delgado; *Planetário do Porto – Centro de Ciência +Acessível – projeto PLANETARY EXPEDITION*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
115. Tomás Casals Namura Borges Pinto; *Planetário do Porto – Centro de Ciência +Acessível – projeto PLANETARY EXPEDITION*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
116. Ana Sofia Conde Nabais; *Planetário do Porto – Centro de Ciência +Acessível – projeto PLANETARY EXPEDITION*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
117. Diogo da Costa Guerra; *Planetário do Porto – Centro de Ciência +Acessível – projeto COSMO ZONE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
118. Rodrigo André Moreira Teixeira; *Planetário do Porto – Centro de Ciência +Acessível – projeto COSMO ZONE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
119. João André Costa Jorge; *Planetário do Porto – Centro de Ciência +Acessível – projeto COSMO ZONE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário

- Vairinhos (UA), Carlos Santos (UA); February - June 2023
120. Francisco Miguel Fidalgo Padrela; *Planetário do Porto – Centro de Ciência +Acessível – projecto COSMO ZONE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
121. Beatriz Sofia da Costa Salazar; *Planetário do Porto – Centro de Ciência +Acessível – projecto CONSTELLATIONS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
122. Anita Pereira Rodrigues; *Planetário do Porto – Centro de Ciência +Acessível – projecto CONSTELLATIONS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
123. Miguel Ângelo Coelho da Rosa Tavares; *Planetário do Porto – Centro de Ciência +Acessível – projecto CONSTELLATIONS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
124. Rafael Leonardo Rocha Matos; *Planetário do Porto – Centro de Ciência +Acessível – projecto CONSTELLATIONS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
125. Stella Mosso Corrâ; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE TRAVEL*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
126. António Mateus Marinho Almeida; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE TRAVEL*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
127. Marta Catarina Barbosa Caetano; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE TRAVEL*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
128. Hugo de Sousa Tavares; *Planetário do Porto – Centro de Ciência +Acessível – projecto LIFT OFF*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
129. Eva Filipa Martins Aguiar; *Planetário do Porto – Centro de Ciência +Acessível – projecto LIFT OFF*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
130. Luís Pedro da Rocha Pinto Costa; *Planetário do Porto – Centro de Ciência +Acessível – projecto LIFT OFF*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
131. Salvador Mendes Luís; *Planetário do Porto – Centro de Ciência +Acessível – projecto LIFT OFF*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
132. Antero Rodrigo Ferreira Rito; *Planetário do Porto – Centro de Ciência +Acessível – projecto APUS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
133. Diogo Filipe Oliveira Mota; *Planetário do Porto – Centro de Ciência +Acessível – projecto APUS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
134. Isadora Gonçalves de Andrade; *Planetário do Porto – Centro de Ciência +Acessível – projecto APUS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
135. Luana Martinelli Moreira; *Planetário do Porto – Centro de Ciência +Acessível – projecto APUS*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
136. Lara Miguel Santos Lourenço; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANET QUEST*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023

- Vairinhos (UA), Carlos Santos (UA); February - June 2023
137. Gonçalo Correia Oliveira; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANET QUEST*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
138. Renato Silva Pires de Almeida; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANET QUEST*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
139. Tiago Costa Antunes Baptista; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANET QUEST*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
140. Margarida Teixeira de Freitas Bastos; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO DATA + ASTRO PRIZE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
141. Maria Rodrigues Monteiro; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO DATA + ASTRO PRIZE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
142. José Leandro Freitas Duarte; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO DATA + ASTRO PRIZE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
143. Artur Fernandes Ramos; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO DATA + ASTRO PRIZE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
144. Juliana Ferreira Vidal; *Planetário do Porto – Centro de Ciência +Acessível – projecto ALIENS ADVENTURES*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
145. Alberto Silva Bastos; *Planetário do Porto – Centro de Ciência +Acessível – projecto ALIENS ADVENTURES*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
146. Tiago Oliveira Reis; *Planetário do Porto – Centro de Ciência +Acessível – projecto ALIENS ADVENTURES*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
147. Pedro Fellype Coelho Loyola; *Planetário do Porto – Centro de Ciência +Acessível – projecto ALIENS ADVENTURES*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
148. Pedro da Silva Henriques; *Planetário do Porto – Centro de Ciência +Acessível – projecto ALIENS ADVENTURES*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
149. David Rede Sena; *Planetário do Porto – Centro de Ciência +Acessível – projecto YOUNIVERSE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
150. Diogo José Gonçalves Ferreira; *Planetário do Porto – Centro de Ciência +Acessível – projecto YOUNIVERSE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
151. Isis Daniela Fangana Camacho Coutinho; *Planetário do Porto – Centro de Ciência +Acessível – projecto YOUNIVERSE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
152. Joana da Cunha Araújo; *Planetário do Porto – Centro de Ciência +Acessível – projecto YOUNIVERSE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
153. Filipa Martins Sequeira; *Planetário do Porto – Centro de Ciência +Acessível – projecto INVASÃO A MARTE*,

- licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
154. Ana Patrícia Gomes de Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto INVASÃO A MARTE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
155. Júlia Köche Godinho; *Planetário do Porto – Centro de Ciência +Acessível – projecto INVASÃO A MARTE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
156. Sofia Ruge Martins; *Planetário do Porto – Centro de Ciência +Acessível – projecto INVASÃO A MARTE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
157. Ariana Ayumi Ferreira da Costa; *Planetário do Porto – Centro de Ciência +Acessível – projecto INVASÃO A MARTE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
158. António Duarte Coelho Alves de Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE WISE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
159. Celina Isabel Almeida Cruz; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE WISE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
160. Rafael Amaro de Almeida; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE WISE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
161. António L. Pedro da Graça Vasconcelos; *Planetário do Porto – Centro de Ciência +Acessível – projecto SPACE WISE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
162. Tatiana Mateus Esteves; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO ADVENTURER*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
163. Rodrigo Martinho Dias; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO ADVENTURER*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
164. Marcela Laércia Homalom Insali; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO ADVENTURER*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
165. Filipa Lobão Dias; *Planetário do Porto – Centro de Ciência +Acessível – projecto ASTRO ADVENTURER*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
166. João de Castro Oliveira; *Planetário do Porto – Centro de Ciência +Acessível – projecto THE EVOLUTION OF LIFE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
167. Ana Cristina Ferraz Araújo; *Planetário do Porto – Centro de Ciência +Acessível – projecto THE EVOLUTION OF LIFE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
168. Tomás Rafael Cabral Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto THE EVOLUTION OF LIFE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
169. Leonardo Castro Bastos; *Planetário do Porto – Centro de Ciência +Acessível – projecto THE EVOLUTION OF LIFE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisores: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023

- Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
170. Daniela Romão Santos; *Planetário do Porto – Centro de Ciência +Acessível – projecto INTERGALACTIC ADVENTURE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
171. Maria Miguel Martins Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto INTERGALACTIC ADVENTURE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
172. Carolina Sofia Manteigas Duarte; *Planetário do Porto – Centro de Ciência +Acessível – projecto INTERGALACTIC ADVENTURE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
173. Mariana Silva Cabral; *Planetário do Porto – Centro de Ciência +Acessível – projecto INTERGALACTIC ADVENTURE*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
174. Pedro Miguel Valente de Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANETARIUM PURSUIT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
175. Gabriel Martins Rosa; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANETARIUM PURSUIT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
176. André dos Santos Francisco; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANETARIUM PURSUIT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
177. Gonçalo Pereira Soares; *Planetário do Porto – Centro de Ciência +Acessível – projecto PLANETARIUM PURSUIT*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
- Vairinhos (UA), Carlos Santos (UA); February - June 2023
178. Tiago Pinhão Paralta; *Planetário do Porto – Centro de Ciência +Acessível – projecto BOOKID*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
179. Bruna Campos Riba; *Planetário do Porto – Centro de Ciência +Acessível – projecto BOOKID*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
180. João António Pimenta Neves; *Planetário do Porto – Centro de Ciência +Acessível – projecto BOOKID*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
181. Flávio Daniel Bastos de Oliveira Brandão; *Planetário do Porto – Centro de Ciência +Acessível – projecto BOOKID*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
182. André Pais Rodrigues; *Planetário do Porto – Centro de Ciência +Acessível – projecto (sem título)*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
183. Pedro Henrique Pacheco Sousa; *Planetário do Porto – Centro de Ciência +Acessível – projecto (sem título)*, licenciatura em Multimédia e Tecnologias da Comunicação, da Departamento de Comunicação e Arte da Univ. de Aveiro; Supervisors: Paulo J. T. Pereira com os docentes Pedro Cardoso (UA), Maria João Lopes Antunes (UA), Oscar Mealha (UA), Mário Vairinhos (UA), Carlos Santos (UA); February - June 2023
184. Kevin da Silva Cunha; "Calendário Cósmico". Acolhimento e co-orientação do projecto de design e ilustração, com a docente Emília Dias da Costa, do estágio académico do 4º ano da licenciatura em Design de Comunicação da Faculdade de Belas Artes da Universidade do Porto; Planetário do Porto; Supervisor: Paulo Pereira; February - June 2023
185. Sofia Aragão Fonseca Maru Oliveira; "Desenvolvimento de Personagens". Acolhimento e co-orientação do projecto de design e animação, com a docente Emília Dias da Costa, do estágio académico do 4º ano da licenciatura em Design de Comunicação da Faculdade de Belas Artes da Universidade do Porto; Planetário do Porto; Supervisor: Paulo Pereira; February - June 2023
186. Kaustav Goswami; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe*; Supervisor: Pedro M. Martins; July 2023 - July 2023
187. Prajna Mahakur; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for*

- the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
188. Shashwat Sourav; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
189. Duarte Barreta; *Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe, Astro Summer Internships Program 2023; Supervisor: Pedro M. Martins; 10-28 July 2023*
190. Gustavo Monteiro; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
191. Sara Rijo; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
192. Tiago Melo; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
193. Leonardo Rodrigues; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
194. Jarno Sandrin; *Astro Summer Internships Program 2023: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
195. André Correia; *Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Pedro M. Martins; July 2023 - July 2023*
196. Leonor Bernardo; *Gulbenkian projects: Martian fluvio-marine environments studies; Supervisor: Pedro Machado; November 2023 – September 2024*
197. Margarida Graça; *Gulbenkian projects: Exoplanets atmospheres - Transmission spectroscopy studies; Supervisor: Pedro Machado; November 2023 – September 2024*
198. Henrique Eira; *Spectral Endmember: spectral fingerprints of planetary contents; Supervisor: Pedro Machado; 2023*
199. Leonor Bernardo; *IA Summer Internships; Supervisor: Pedro Machado; July 2023 - July 2023*
200. Mariana Encarnação; *IA Summer Internships; Supervisor: Pedro Machado; July 2023 - July 2023*
201. João Simões; *On the cosmic relevance of a cosmological constant; Astrophysics Project; Supervisor: Pedro P. Avelino; 2023*
202. Ricardo Borges Vilhena; *Astrophysics Project: Cosmic domain walls; Supervisor: Pedro P. Avelino; 2023*
203. Daniela Teixeira; *ESS final project: Determinação dos efeitos na qualidade subjetiva do sono da mudança de horário Inverno-Verão em estudantes do ensino superior, estudo observacional; Supervisor: Raul Cerveira Lima, Liliana Leite; 2023 - 2024*
204. L. Rodrigues; *IA Summer Internship: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Rodrigo Carvajal; July 2023 - July 2023*
205. G. Monteiro; *IA Summer Internship: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Rodrigo Carvajal; July 2023 - July 2023*
206. A. Correia; *IA Summer Internship: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Rodrigo Carvajal; July 2023 - July 2023*
207. D. Barreta; *IA Summer Internship: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Rodrigo Carvajal; July 2023 - July 2023*
208. T. Melo; *IA Summer Internship: Multifrequency Analysis and Machine Learning for the most powerful quasars in the Universe; Supervisor: Rodrigo Carvajal; July 2023 - July 2023*
209. Bárbara Pavanito; *internship of bachelor students in Digital Animation of Lusófona University: Creation of educational short film animation in Astronomy Literacy; Supervisor: Sérgio Pereira; November 2022 - January 2023*
210. Beatriz Neto; *internship of bachelor students in Digital Animation of Lusófona University: Creation of educational short film animation in Astronomy Literacy; Supervisor: Sérgio Pereira; October 2023 – ongoing*
211. David Grenho; *internship of bachelor students in Digital Animation of Lusófona University: Creation of educational short film animation in Astronomy Literacy; Supervisor: Sérgio Pereira; November 2022 - January 2023*
212. Giovanni Martins; *internship of bachelor students in Digital Animation of Lusófona University: Creation of educational short film animation in Astronomy Literacy; Supervisor: Sérgio Pereira; November 2022 - January 2023*
213. Henrique Antunes; *internship of bachelor students in Digital Animation of Lusófona University: Creation of educational short film animation in Astronomy Literacy; Supervisor: Sérgio Pereira; November 2022 - January 2023*
214. Pedro Gamito; *Bolsa Gulbenkian, novos talentos: Testing Einstein's gravity with future missions; Supervisor: Sérgio Pereira; October 2023 – June 2024*
215. 8 high school students; Ser Cientista (FCUL); *À descoberta do Universo escuro com a missão Euclid; Supervisor: Ismael Tereno; July 2023 - July 2023*
